Hi Terry,

Thanks for your patience. The ForeFlight Mobile app synchronizes some information to our server when the iPad or iPhone is connected to the Internet. So information about flight planning before the flight may be on our servers, but actions taken while in-flight won't be on our servers unless the iPad or iPhone somehow was able to achieve a good a cellular data connection while in-flight.

He didn't use ForeFlight to file a flight plan for the flight from 8S1 to Sacramento, and he didn't request a briefing for the flight either. He also hadn't looked at any static Weather Imagery inside the app prior to the trip.

But on 8/11/19 he planned a route from KOXR to KFUL.

Prior to that on 8/5/2019 he planned a route from KOXR N58 8S1.

Let us know if you need anything else on this one,

-Josh
