Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Propeller bent, right side of firewall slightly bent resulting in indentation of right forward fuselage, lower right engine mount bent

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

At 1130 I departed the SZT airport en route to ALW for fuel before continuing on to MAN for my planned overnight. I had received a weather briefing from flight service earlier that morning and filed my flightplan from foreflight. I departed the airport to the south initially climbing to 3500msl while in the valleys proceeding southwest bound. North of COR I called Boise Radio to activate my flightplan, then changed to Spokane Approach to request traffic advisories, in which time I also climbed to 6500msl to try to find smoother air, as it was moderate turbulence. After being unable to find smoother air and having traffic advisories canceled as I flew further south and out of Spokane Approach's airspace, I descended back to 3500msl for the remainder of the flight. Turbulence remained moderate for the entire flight. 15 miles north of ALW I called Seattle Radio to close my flightplan. I then listened to the ASOS at ALW and contacted tower to receive my pattern entry instructions. During the controller's readback, the engine spluttered twice and stopped. I checked the oil pressure and temperature gauge, both of which were normal. ALW Tower called me back and I declared an emergency, stating my location and nature of the emergency. I applied full throttle, full rich mixture, full carb heat, verified my mags were set to both, and verified that my fuel cutoff switch was in the on position. Failing to restart the engine, I established a glide while searching for a place to land. Ruling out turning around, as I was in a very hilly area and 1000' above the tops of the hills, I looked forward and spotted a field to my front right, which I angled for. I did not have enough energy to clear the top of the hill and be able to make a decision on the other side as I was about a mile away. I used a combination of spoilers and slipping the airplane to lower my altitude to make the field, which I realized was on the side of a hill as I approached the ground. I established a normal landing attitude, at which point the propeller ceased windmilling. As I landed and began aerodynamic braking, the ground caught the wheels and the plane pitched forward on its nose before settling back down on the ground. I turned off the electrical system, cutoff the mixture and throttle, turned off the mags, made sure the ELT was on, and exited the airplane and called 911.
