Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Port wing struck runway distance marker, crushing center section. Runway distance marker (3/4000 feet) destroyed. Starboard gear collapsed sideways and punctured wing skin. Nose gear collapsed to port side. Propeller blades struck gravel. Starboard stabilator dented.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Pleasure flight departed KCXP approximately 7:40am PDT. departed pattern from the left downwind leg to the north. Weather conditions were calm wind, CAVU, and about 40 degrees F. Called Norcal on 119.2 for flight following through KRNO Class C airspace. Proceeded north on the east side of the Reno valley at 8000' msl. Crossed over KRNO to the northwest at 8000' msl and was cleared to KRTS. Given VFR squawk approximately 5mi NW of KRTS and began descent for KRTS right downwind leg for rwy 26. Flew pattern normally, good approach, and touched down on mains at about the 14/32- 8/26 intersection. As I held the nosewheel off per training, the aircraft "flared" a bit, maybe 1-2 feet off the runway, then settled. When the nosewheel came down on the runway, it veered to the left of the runway centerline. I corrected back toward the centerline, but the aircraft over corrected to the right. I had lost enough airspeed that I was not comfortable attempting a "go-around". I again tried to get to the runway centerline, but it again over corrected, this time to the left. I attempted to get the aircraft back to the right, and it moved toward the right runway edge. I corrected back to the left, and I felt that at this point, the aircraft was in danger of a groundloop. as the aircraft veered toward the left runway edge, i saw we were going to leave the pavement, so I steered the center of the aircraft between a taxiway marker sign and a runway distance sign. The port wing struck the runway distance marker sign, and the aircraft spun sideways toward the left. We began to slide sideways to starboard, the starboard gear collapsed inward, and the starboard wingtip slid in the gravel, coming to rest at the edge of taxiway A2. The nosegear also collapsed to port. The engine was still running, so I pulled the mixture to idle cutoff. When the engine stopped, I turned off all of the electrical switches, the master, and checked to make sure that my two passengers were uninjured. I unlatched the top latch of the single door, and instructed the front seat passenger to exit, then assist the back seat passenger out. I then exited the plane and called a friend at the airport to notify authorities.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

All concerned parties (airport management, FBO, FAA, NTSB) have been exemplary to deal with and helpful.

The FAA feels as though this was a mechanical failure caused by 60 years of use and hidden corrosion. Outside of non-destructive testing of the nosegear mount and engine mount, I don't know what could be changed.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

The FAA feels that the engine mount/ nosegear mount failed because of hidden corrosion issues. This part was original to the airframe.
