Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

FLIPPED ON BACK, TAIL BROKEN OFF, ENGINE COMPARTMENT HEAVY DAMAGED

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I was on a test flight as the engine had not flown since Sept. 2018. Prior to this flight I moved all the sparks plugs and sprayed oil into each cylinder, as this engine is noted for rusting while idle. Turned the engine over by hand for twenty to thirty turns. Engine felt smooth. Used engine starter to bring up oil pressure. It showed 11psi. Cleaned spark plugs and checked gage. Reinstalled IAW Jabiru manual. Tried to start it, but battery too weak. Took battery to battery shop and they found battery OK, reinstalled it and charged it over two days then used starting fluid and engine fired right away. Run engine for twenty to thirty minutes getting temperature into the green. Shut down and installed breather boxes over cylinders and top cowling. Started engine again and checked instruments and checked mags they were good was OK and took off from KDWA. Turned to the west and climbed to three thousand feet. #3-cylinder temp was climbing and was at 180C. Leveled off and brought power back to 2300 rpm to get into the cruise range of the fuel needle. Turned south toward Winters over the I505. Was checking airspeeds using higher power settings. I pushed power up to 2950 RPM and checked airspeed 95Kts. Just then heard loud noise, vibration and loss of power. Turned towards KDWA and reduced power. After checking MGL EFIS determined that I had lost #5 cylinder. I increased power and engine continued to run, but with a small vibration. Called Mayday on KDWA's freq. Gave position and stated that I was on base of Winters 34. As I approached final turn the engine creased. I believed I was about two miles from runway 34 and in a good position to make a dead stick landing on 34. As I approached highway 31 my aiming spot started moving towards me at high rate. I checked my vertical speed. It showed 690. It looked like I would be landing in two fields with trees and fences in front of me and then I got a warning from the EFIS that there was a plane at 6 o'clock 300 feet lower. I turned to the left as I thought that there was a little bit of head wind in that direction. The field I selected was a plowed field with furrows. Not the best with a tri-gear airplane. I started a slip to lose altitude and over did it and lost control for a few seconds. When I regained control a weather station tower was in front of me. I continued to the left then back to the right to line up with the furrows and run of air.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

marked battery location on outside of aircraft. design a fuel valve so fuel does not back flow out of filler neck.
