Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The right main gear axle on this Cessna 140 sheered off at low speed while on roll out. The main gear leg dug into the tarmac, and the tail slewed around to the right, almost 180 degrees, bending the tail wheel, bending the gear box and both cabin side rails, detaching the seat from its attachment point on the right side of the cabin, and seriously damaging the fuselage. The right wing tip touched lightly, with damage to a spar on the trailing edge of the right wing apparent through the skin of the wing.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

We departed at about 1:05 p.m. from Independence State Airport (7S5), to Newport Municipal Airport (KNOP), with some deviations from the most direct route while doing training maneuvers. We did a normal full stop landing and take off at Newport at about 1:45 p.m., and then continued up the coast to the mouth of the Siletz River, and then flew back to Independence, with similar deviations along the way for training maneuvers. We landed normally at Independence State Airport (7S5) at about 2:15 p.m. on Runway 34, and had rolled out about 2080 feet, and come down to taxi speed, moving normally toward the next taxiway to leave the runway when there was sudden violent jerk and jolt, followed almost immediately by the tail slewing violently and jerkily around to the right, almost 180 degrees, and the aircraft coming to rest on the runway, missing the right main gear, with the tail wheel bent, and the fuselage damaged.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

The right main gear axle (Cessna Part Number 0441107, no serial number known) sheered off, while taxiing up the runway to the next taxiway to leave the runway.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

Per discussion on July 1, 2019, with Tealeye Cornejo, Air Safety Investigator for this matter, I did not report flight time from the 1980s in the matrix on page 5, as this time was on a Canadian license that has expired due to the passage of time. The expiry of the Canadian license means that my Foreign License Based Certificate has also ceased to be valid. This Canadian time from the 1980s was reported to the FAA as part of my record of total time, however. The Canadian time was 112 hours total, with 44.1 hours solo, and 67.9 hours dual.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE**Date of this Report**07/02/2019*mm/dd/yyyy***Name of Pilot/Operator:** Steven A. Heinrich**Signature:** _____
