NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

For Saturday, July 20, 2019 I had invited my friend Siegfried Heller to accompany me on a pleasure flight to Port Townsend, Washington to enjoy the famous \$100 hamburger at the local airport restaurant. We met at 10 AM at my place at the Parkside Airport (WA87). I checked the weather, did my preflight inspection and we left for Port Townsend at 11:21 AM where we arrived at 12:17 AM. The entire flight to Jeffco was conducted in perfect VFR conditions for sightseeing. Our approach to the Jeffco airport 0S9 was routine, we entered the left downwind for runway 09, and had an uneventful landing with normal rollout. After about 1,500 feet we cleared the runway and taxied to the parking area of the Spruce Goose Café.

After spending almost three hours at the restaurant we took off from the airport at 03:11 PM again using runway 09 for the return flight to Parkside. The weather conditions were identical to those of our outbound flight. I started my decent to WA87 out of 5,500 feet altitude at a distance of 16 miles to arrive at 1,000 feet altitude for the approach to Parkside Airport. Our airspeed had been reduced to 130 knots. I had obtained the current weather conditions for the Portland area from the PDX ATIS (altimeter setting 29.95 in Hg, temperature 20°C). I checked wind speed and direction by overflying the airport and looking at the windsock (very light easterly wind). I entered right downwind for runway 07. Our approach was uneventful. I landed the Bonanza very close to the runway threshold with an approach speed of about 70 knots. Rolling down the runway I realized that the airplane's speed was not decreasing as it normally did and that the engine RPMs appeared to be higher than usually. My attempts to lower the RPMs by manipulating the throttle control did no result in the expected response of the engine. Meanwhile we were rapidly approaching the runway's end, and as my last resort, I was able to stop the engine by using the mixture control. However; we overshot the runway's end, ran over the adjacent road, and the left wing hit a metal pole. The aircraft was forced into an abrupt left turn, slid slightly to the right and came to a complete stop after having turned by about 180°. The local time was 04:20 PM. Fortunately, the sudden stop did not cause us any injuries. My passenger Siegfried Heller opened the plane's door and exited the aircraft. After turning off the controls for the electric and fuel components, I also left the cockpit – unharmed! At that time, I didn't realize how severely the airplane had been damaged. We were just plain grateful for having escaped this accident without any bodily injuries.
