NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Statement from James Hunt, Crew.

On 7/27/19, I accompanied pilot Clifford Goins during a flight from the Lane County Fair Grounds to the Eugene airport (KEUG). The aircraft was on static display during the day at the County Fair and we departed the fairgrounds around 2210 for the short flight back to the Sheriff's hangar at the Eugene Airport. The departure and enroute phases were uneventful. The weather was good VMC. I assisted Pilot Goins with the radios and contacted the tower. We were approaching the airport from the southeast and were advised to remain east of 34R for arriving traffic. We turned to the north about one mile east of 34R with the arriving traffic in-sight on short final. We continued north until cleared to cross behind the traffic now rolling out on 34R. We proceeded east to west across the airport, passing just to the south side of the airport fire station and over our hangar row. A wind check from the tower indicated about a 10-kt. breeze at 340. Once over the north ramp, pilot Goins turned to the north into the wind. At that point, we were slightly above the light standards on the ramp (25 to 30 feet AGL) and indicating about 25 kts. To that point, everything was quite routine. I saw, felt or heard nothing to indicate a problem until the aircraft suddenly yawed to the right and began a spin in that direction. I recall pilot Goins saying, "we have a problem." I believed we had incurred a loss of tail rotor thrust due to a mechanical failure. I also believed we were too high for hovering autorotation. At that point, I joined pilot Goins on the controls, with the objective of getting the aircraft to the ground on the skids and in a level attitude. I lowered the collective to slow the spin with the hope I could then slow the descent with power then perform a hovering autorotation by rolling off the throttle around 10 feet AGL and contact the ground in a level attitude and slow spin. Unfortunately, we hit the ground just as I was beginning to slow the descent. The impact was significant. We came to rest upright on the skids with the engine running. I felt some pain in my lower back and asked pilot Goins how he was doing. He replied he was in pain but could exit the helicopter on his own. We turned off the electronics, the battery master and shut down the engine. We were both able to exit after the main rotors stopped.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Waiting on investigation determination.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained.

We lift off from the fair grounds after sunset, proceeded direct to the Eug. airport. Tower had us hold east of the runway 34r till other traffic had cleared. Then cleared us to the north ramp. As I approached the ramp I was still a little high so I was lowering collective (Jim said lets swing it around to the north we still has some gust) at that point I was just above the lamp post and I let off a little pressure of the left pedal the aircraft swung to the right everything looking good at that point. Applied left pedal to stop rotation, rotation did not stop. Applied full left pedal, did not stop rotation. I lowered collective to try and slow the spin and At that point I yelled at Jim (somethings wrong) he got on the controls and put it on the ground.

RECOMMENDATION (How could this accident/incident have been prevented?)
