Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Propeller, LH wing, NOSE LANDING GEAR SHAVED OFF, NOSE AND BELLY DAMAGE, RUDDER DAMAGE, INTERNAL ENGINE damage

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I arrived to the tanker base at 10:00 local time and began my preflight. No contaminants were found in the fuel and both tanks were full. The oil was reading 11 QTS on the dipstick. Preflight completed with nothing out of the ordinary, I then attended the morning fire briefing where the daily weather and aircraft deconflict were discussed. We departed for our fire recon mission around 3:30 local time after a storm had passed and was a good distance away. The engine start was normal. The takeoff and climb out were normal, engine temperatures and pressures stayed in the green on all gages. We flew between 8,000 and 4,500 feet MSL during the flight staying on average around 6,000 MSL. Power setting was 2,300 RPM and 19" MAP. Gages were checked every 10-15 minutes; everything was indicating normal. At 2.8 hours into our flight, as we were over Rustler Peak, scouting a fire, we heard a loud bang. All of a sudden the airplane began violently shaking so much so that I could not accurately read any of the flight instruments. I believe we were around 5,500-6,000 MSL about 1,500-2,000 AGL.

As soon as the airplane started shaking I pulled the prop control to remove drag in an attempt to extend my glide distance and hopefully minimize the shaking. The prop continued to windmill for the rest of the flight. The air attack immediately got on the radio and made a mayday call to dispatch. I looked around and to my left found the only open suitable spot to make a safe landing. I immediately turned towards the clearing judging how I was going to setup for a landing. I then activated the ELT and switched to 121.5 and said "Mayday, Mayday". With the aircraft still violently shaking I secured the plane for landing. I remember saying out loud "fuel off, mixture out, throttle out." I kept the Battery Master on so I could use the flaps when needed. On downwind I tightened my seatbelt and said out loud "rear door is open" and "my door is open" we made a sweeping 180 degree turn to final. We were only about 100-300 feet above the trees which I would guess to be about 150 feet tall. About halfway through that turn I realized we were going to make the clearing and started dumping on full flaps. Being a confined area I did not want to overshoot my clearing and end up in the trees on the other end. We cleared the last big tree as full flaps came in. I kept the nose of the airplane pointed down to keep a safe airspeed with the increased drag from the flaps. As we came close to the ground I rotated and tried to make as normal of a landing as I could not realizing it was a swamp. As soon as we hit we got thrown forward in our seatbelts. The airplane stopped very quickly. When it came to a full stop we both unbuckled out seatbelts and evacuated out the pilot's side door. We meet up about 15 feet away from the airplane. we both asked if the other one was ok, realizing we both got out without any injuries we could breathe a sigh of relief.
