DAMAGE TO AIRCRAFT AND OTHER PROPERTY		
Aircraft Damage ☐ None ☐ Substantial ☒ Minor ☐ Destroyed ☐ Unknown	Aircraft Fire ☐ None ☐ Both Ground and In-Flight ☒ In-Flight ☐ Fire at Unknown Time ☐ On-Ground ☐ Unknown	Aircraft Explosion ☒ None ☐ Both Ground and In-Flight ☐ In-Flight ☐ Explosion at Unknown Time ☐ On-Ground ☐ Unknown
Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> The description of damage was: * Three eye bolts attached to the balloon basket. * The Nomex scoop and skirt at the bottom of the balloon envelope which was burned and extinguished immediately. * Approximately one square foot of the nylon balloon envelope fabric. There was no damage to the property where I landed.		
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i>		
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible. On August 10, 2019 at approximately 8:45 a.m. at the McFarland Living History Ranch, Galt, California, the crew had just taken all passengers away from the basket and I was getting ready to lay my balloon down after tethering for about one hour. (Tethering: having three heavy 60 foot ropes attached to three points of the basket and tied off to heavy trucks at each corner of the field) I was the only person in the basket. I was giving my crew instruction for packing up because the winds that had been light and variable were increasing in speed and the warmth of the sun was causing some thermal activity. After all passengers had exited the basket, I had my crew of approx. 10 people with their weight on the basket from the outside. Suddenly a gust of wind and possibly a thermal hit the balloon and lifted it out of my crew's hands. It lifted at a high rate of speed to the end of the ropes, approximately 50 feet high. I opened the top vent to release some heat, there is a lag time for cooling the envelope and after waiting for it to cool about one minute, one rope snapped off where the carabineer attaches to the balloon, leaving all the pressure on the remaining two ropes. About 30 seconds later a second rope came loose from where the carabineer attaches to the balloon. Having lost two of the tie downs, all the weight of the balloon being pushed by the wind was on just one rope. Down wind at the end of the field there was a row of power lines. At this time I thought if I were to bring it down now it would hit those lines. I wanted to try to fly on and the only way to do this was to have the crew cut the last rope. They cut the rope for me and I had to add heat to the envelope to lift above the power lines. The pressure of the release of the last rope caused the basket to twist a little which closed the throat, (the bottom opening of the envelope). The flame from the burners burned the fabric at the bottom of the envelope. (The fabric that burned is Fire Retardant Nomex and does not continue to burn to create an actual fire. Once the flame from the aircraft burner is turned off, the fabric goes out.) This made it hard to add more heat to get the lift I needed to fly on without burning more fabric. At that time, with the wind slowing down, I saw a field directly below me and chose to land there. Without the balloon being fully inflated the decent was fast and resulted in a hard landing. After a hard landing in the open field, I turned the burners off and crawled out of the basket.		

RECOMMENDATION (How could this accident/incident have been prevented?)		
Operator/Owner Safety Recommendation To replace eye bolts used to attach tether ropes to balloon with double A-blocks.
