Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> Forced landing in grass/vegetation short off and to the right of RWY 22 at KHCR resulted in pole impacting right wing. Fuel tip tank on left wing damaged. Prop strike.					
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i>					
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.					
VFR flight from KMYF to KEVW. Due to a high, gusting crosswind at KEVW, I diverted to KHCR. SLC Center provided traffic advisory and switched me to KHCR UNICOM. I entered the KHCR traffic pattern. Turning base to final, I made a slight power reduction. With that power reduction the engine quit without prior notice. After establishing best glide, I attempted a restart but was unsuccessful. Due to an approximate 20 knot headwind, I became concerned that my glide path would take us short of the runway and that I would impact a storage building, so I turned to the right to avoid the structures. I cleared the airport's SW boundary fence by a few feet as the stall horn went off. Good touchdown but due to the maneuver to avoid the obstacles, I now had a strong left crosswind component. I saw a steel pole ahead slightly to the right, but was unable to avoid the pole which impacted the right wing. The plane came to a stop and we secured and evacuated.					

RECOMMENDATION (How could this accident/incident have been prevented?)		
Operator/Owner Safety Recommendation Fly a steeper glideslope which will allow for glide to the runway in event of engine failure, considering headwind component.		
MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)		
Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No <i>(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)</i> The engine failed at approximately 400' AGL.		Total Time/Cycles On Part <u>283.5</u> Hours ____ Cycles Time Since This Part Inspected/Overhauled <u>54.2</u> Hours
