MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)**Was there Mechanical Malfunction/Failure?** ☒ Yes ☐ No ☐ Unknown

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Aircraft was trimmed for cruise and flying at 11,000 feet with the autopilot on, all engine instruments indicated green, with no unusual audio or visual cues. The aircraft's engine sputtered, and then quickly died. The propeller was not windmilling, and when attempts were made to restart the engine the propeller did not turn. The engine seized.

Total Time/Cycles On Part1770.2

DAMAGE TO AIRCRAFT AND OTHER PROPERTY**Aircraft Damage**

- ☐ None ☒ Substantial
☐ Minor ☐ Destroyed

Aircraft Fire

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Unknown Origin
☐ On-Ground

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Unknown Origin
☐ On-Ground

Description of Damage to Aircraft and Other Property (use additional sheet if necessary)

I deployed the BRS parachute. The parachute deployment destroyed the canopy glass. When the aircraft touched down the left main gear collapsed as well as the nose gear. Damage to the left wing tip, aileron, and wing root is apparent as well as damage to the area below the canopy front he parachute securing wires.

AIRPORT INFORMATION (If the accident/incident occurred on approach, takeoff or within 3 miles of an airport, complete this section)

Airport Identifier: _____ Distance From Airport Center: _____ SM
Airport Name: _____ Direction From Airport: _____ degrees MAG
Proximity to Airport ☐ Off Airport/Airstrip ☐ On Airport ☐ On Airstrip Airport Elevation: _____ ft. MSL

Approach Segment (Select one)

FUEL & SERVICES INFORMATION**Fuel on Board at Last Takeoff**

(convert from pounds, as necessary)

22 Gallons

Fuel Type

☐ 80/87 ☐ 115/145 ☐ JP3 ☐ Other, specify _____
☒ 100 Low Lead ☐ Jet A ☐ JP4
☐ 100/130 ☐ Automotive ☐ JP5

Other Services, if Any, Prior to Departure

Prior to departing KPVU I called for fuel from the FBO and they added 6 gallons per side.

EVACUATION OF AIRCRAFTWas an emergency evacuation of the aircraft performed? ☐ Yes ☒ No**Method of Exit** – Describe how the occupants exited and how many occupants evacuated each location

Solo occupant exited the aircraft through the broken canopy. The partially inflated billowing parachute prevented the canopy from opening fully, therefore I was required to exit through the broken canopy glass.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State time and point of departure, intended destination, and services obtained. Prior to taking off I completed the required weight and balance, weather, and inspection of the aircraft, in which everything pertaining to the aircraft and detailed information for the flight looked good and normal. I then called the FBO to assist me with fueling. They added 6 a side of 100LL to equal 22 gallons total. After, I double checked the sumps and oil and continued to start my run up. I departed from KPVU at 17:30 and headed south. I flew with the intention of going KPVU-KDTA-KFOM-KMLF-KPVU. When I was on my return leg to Provo, about 20 NM northwest of KFOM, there was a flutter sound with the engine and then the engine suddenly ceased operation. I was at 11,000 ft and instantly pitched for best glide, 60 KIAS. I then performed the items on the emergency checklist, and was unable to get the engine to restart. With it being so dark, not being able to see the ground, not being able to identify a safe landing spot, and my altitude decreasing I made the decision that pulling the parachute may need to happen. The winds were calm, and I continued to glide towards the freeway. Knowing I was not quite going to make it to the freeway, I pulled the parachute about 500-700 AGL prior to landing. The parachute suddenly jolting me up and to the left and then the right prior to impact with the ground. The area was a big field with lots of sage brush & fairly bumpy grounds, with the closest city being a 15min drive away. While I waited for the Sheriff the parachute continued to flutter in the breeze and tug at and rock the plane causing more damage. I was not injured, and was able to exit the aircraft without assistance.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

The aircraft undergoes continual maintenance which include but are not limited to 50 hour oil changes, 100 hour inspections, 600 hour gear box pulls. The aircraft was inspected less than 100 hours prior. The aircraft was determined to be in airworthy condition by the maintainer who performed the 100 hour inspection.

Until it is determined what caused the mechanical failure Bountiful Flight cannot determine what action may have prevented the failure. The pilot performed the emergency checklist and was unable to get the aircrafts engine to restart. They then made the decision to deploy the parachute. The pilot performed as they should have based upon the facts that were available to them at the time. The pilot however could have altered their route of flight known the terrain and environment they were flying in to fly closer to major roadways, however this is not a requirement.
