NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I departed from KLBK on an IFR flight plan after having all fuel tanks filled. I took off @ ~1:45 PM CST and climbed to 22,000 feet and flew directly to KSPI. I requested GPS approach to Runway 31 @ KSPI, which was cleared by ATIS direct JITSU with descending altitudes. Once on the approach, the runway was clearly in sight. Flaps & landing gear were deployed while approach speed was set. Patches of ice and snow were on the runway. I touched down on speed & on centerline. As I moved the throttles to the beta position, it felt that the left prop went to beta position, while the right did not. This resulted in a course about 30°-35° to the left. Attempts to correct this with nose gear control had no effect. While trying to adjust the throttles, the aircraft departed the runway to the left, and began to spin, causing failure of the right main landing gear, impaction of the right wing tip with tip tank separation, prop strike on the right and warping of the nose gear. The aircraft stopped and I shut down the left engine and evacuated the aircraft with passengers. There were no injuries or fire.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

There appeared to be a lack of simultaneous action of props going into the beta range
