

NATIONAL TRANSPORTATION SAFETY BOARD

NTSB Form 6120.1

PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

Email the pilot/operator aircraft accident/incident report to the investigator-in-charge of your accident/incident. If email is not available, mail the report per the instructions below.

If your accident/incident occurred in Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Mississippi, Alabama, Georgia, Florida, the District of Columbia, Puerto Rico, or the US Virgin Islands, send the form to: NTSB, ERA, 45065 Riverside Parkway, Ashburn, VA 20147.

If your accident/incident occurred in Ohio, Michigan, Indiana, Wisconsin, Illinois, Minnesota, Iowa, Missouri, Arkansas, Louisiana, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Colorado, or New Mexico, send the form to: NTSB, CEN, 4760 Oakland Street, Suite 500, Denver, CO 80239.

If your accident/incident occurred in Montana, Wyoming, Idaho, Utah, Arizona, Nevada, Washington, Oregon, California, Hawaii, or the territories of Guam or American Samoa, send the form to: NTSB, WPR, 505 South 336th Street, Suite 540, Federal Way, WA 98003.

If your accident/incident occurred in Alaska, send the form to: NTSB, ANC, 222 West 7th Avenue, Room 216, Box 11, Anchorage, AK 99513.

Rules pertaining to notification of aircraft accidents and incidents, as well as overdue aircraft are found in 49 *Code of Federal Regulations* (CFR) Part 830 http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&tpl=/ecfrbrowse/Title49/49cfr830_main_02.tpl. These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

INSTRUCTIONS TO PILOTS/OPERATORS FOR COMPLETING THIS FORM

It is necessary that ALL questions on this report be answered completely and accurately.

If more space is needed, continue on a blank sheet of paper.

Nearest City/Place: Use the name of the nearest community in the state where the accident/incident occurred.

Date/Time: Indicate the date and local time of the event. Be sure to indicate the time zone.

Phase of Operation: Indicate the phase of operation during which the accident/incident occurred.

Aircraft Information: Enter aircraft make and model information as indicated on the aircraft registration certificate, including series. If the involved aircraft is certified as "amateur-built," include the name of the producer of the kit or plans, unless an NTSB employee instructs otherwise.

Maximum Gross Weight: Enter the certificated maximum gross weight for the aircraft involved in the occurrence. This should be the same as the maximum gross weight indicated on the aircraft weight and balance documents.

Engine: Enter engine make and model information as indicated on the engine data plate.

The NTSB uses this form for aircraft accident prevention activities and for statistical purposes. NTSB regulations (49 CFR Part 830) require that **ALL** questions be answered completely and accurately. Completion of this form will take approximately 60 minutes. The NTSB does not guarantee the privacy of any information provided in this form. You need not complete this form unless it displays a valid OMB control number, in accordance with 5 C.F.R. § 1320.5(b), which applies to this collection of information.

B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowlings, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

Type of Fire Extinguishing System: If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

Owner/Operator Information: Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

Revenue Sightseeing Flight: Indicate whether the accident aircraft was conducting **revenue** sightseeing operations under 14 CFR Part 91 at the time of the accident.

Air Medical Flight: Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

Public Aircraft: Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

Purpose of Flight: 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

AERIAL APPLICATION—Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

AERIAL OBSERVATION—These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

AIR DROP—Aerial operations, other than aerial application, that are intended to release items in flight.

AIR RACE/SHOW—Includes any flight operations conducted as part of an organized air race or public demonstration.

BUSINESS—includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

EXECUTIVE/CORPORATE—Company flying with a paid, professional crew.

FERRY—Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

FLIGHT TEST—Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

INSTRUCTIONAL—Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

OTHER WORK USE—Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

PERSONAL—Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

POSITIONING—Non-revenue flight conducted for the primary purpose of relocating the aircraft. Examples include moving the aircraft to a maintenance facility or to load passengers or cargo etc.

UNKNOWN—Use only if the primary purpose of flight is not known.

Other Aircraft—Collision: For all accidents involving a collision with another aircraft, including parked aircraft, check "Collision with other aircraft" under Basic Information and complete this section indicating details about the OTHER aircraft involved in the collision.

Airport Information: Complete this section if the accident/incident occurred on approach, landing, takeoff, departure, or within 3 statute miles of an airport. Please refer to the FAA Airport/Facility Directory or other official source for airport information.

Airport Identifier: Provide the official 3 or 4 character airport identifier number.

Runway: Indicate the number of the runway used, including L, R, or C if applicable.

Runway/Landing Surface: Indicate the type of intended runway/landing surface (do not indicate surface conditions). If the surface type was mixed, check all that apply.

Condition of Runway/Landing Surface: Indicate the condition of the intended runway/landing surface. If multiple conditions existed at the time of the accident, check all that apply.

Weather Information at the Accident/Incident Site: Indicate the weather conditions reported at the accident/incident site at the time of occurrence. If no weather reporting was available for the accident/incident site, indicate the reported conditions at the nearest reporting site. Specify the weather reporting site identifier, the observation time, and distance from the accident/incident.

Sky/Lowest Cloud Condition: Indicate the height above ground level of the lowest cloud condition present at the time of the accident/incident and whether coverage was reported as few, scattered, broken or overcast. Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

NOTAMS (D and FDC), AIRMETs, SIGMETs, PIREPs: Describe all NOTAMS (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

Flight Crewmember Information: Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

Degree of Injury: See Definitions on the top half of Page 1 of the instructions. Minor injury is not defined. If an injury does not meet the criteria for another injury category, select Minor.

Date of Last Flight Review or Equivalent: Enter the date of the most recent flight review, or equivalent, completed by this pilot. Refer to 14 CFR 61.56 for accepted equivalents.

Type Ratings: List all type ratings on the pilot certificate. If the pilot holds no type ratings indicate "none." If the pilot holds a pilot certificate other than student and was flying an aircraft requiring an endorsement, enter the type and date of any logbook endorsement(s) for that aircraft. See 14 CFR 61 for examples of required endorsements.

Student Endorsements: If the pilot holds a student pilot certificate, enter all solo endorsements and dates on the student pilot certificate.

Flight Time: Complete the flight time matrix. Solo flight time should be included as "Pilot-in-Command (PIC)" and all dual flight instruction given should be included as "Time as Instructor."

Additional Flight Crewmembers: Complete this section if there were more than two required flight crewmembers on the aircraft. This also includes a check airman performing official duties but does not include cabin crew. State the capacity served by each included crewmember at the time of the accident.

Passenger(s)/Other Personnel: Enter identification and injury severity information for all passengers, cabin crew, and other personnel involved in the accident. See Page 1 of the instructions for the official definition of injury levels.

Several questions throughout the form allow for multiple responses; when appropriate, choose all responses that apply.

These instructions only pertain to major issue areas covered by NTSB Form 6120.1 Pilot/Operator Aircraft Accident/Incident Report. For additional definitions of questions and responses, please refer to www.ntsbgov.

Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

See attached image. Damage to underside, prop and right flap.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On Friday February 28, 2020 (Bryan Brusman) and Kent Magelby (my flight instructor) flew Chance Wilde and Kaylee Benton to E16 Airport for the purpose of getting additional instruction to prepare for my upcoming AA Check ride the following week. At around 10:40am MS it was a sunny clear day we were left downwind to runway 14 at E16. We tried to extend our gear, the gear would not extend using the gear down switch, I knew this because the normal sound was not made when the switch was flipped into the down position. You can usually hear the hydraulic pump kick on. We made a few more attempts at trying the gear down using the gear down switch. Each attempt failed, we did not get a hydraulic pump light to light up on the annunciator panel and the pump wasn't making a sound. This clearly indicated the hydraulic pump wasn't working. I pushed the annunciator light to make sure all the lights worked on the annunciator panel and they did, the light was working.

I then started looking over the two uses with the green rings that were on my side that had to do with hydraulics and made sure they had not popped to the out position which they hadn't. All uses were still pushed in as normal. I then got out the emergency checklist (see fig 4) from Simcom as well as the POH and went to the emergency gear landing extension checklist in the Simcom pilot emergency procedures handbook. I went through the steps and made sure the battery master was on, the circuit breakers were pushed in again, the day/night switch was flipped to daytime. Kent decided that we had better get heading to a different airport and started helping him find the nearest airport. We did a few circles away from E16 as there was traffic doing touch and goes and we didn't want to be in their way. Kent then asked me to go back to the emergency gear extending checklist like I had simulated to be on with my other instructor, Shawn Bagley. While we flew circles we followed the Simcom emergency gear extension checklist, dropped our airspeed below 90 KTS, pulled the hydraulic pump circuit breaker 25 amp, put the switch in the down position, flipped down the safety and pulled the emergency gear extension red handle and fished tailed the airplane. We could hear and feel that the gear was not extended or we had no green lights on the gear down switch and there wasn't any drag or loud air noise as it normally sounds when the gear is down.

At around 10:55am MS Kent then decided that we should go to San Jose (KSJC) or it was a larger airport with lots of resources and they had a tower and would be a good place for us to fly circles while we played with the emergency gear extension procedures more. I called tower and got permission to fly into their airspace. We flew to San Jose.

Being hopeful we thought we would fly by the tower and they would tell us our gear was down or me and Kent this was just a dream they would tell us the gear was down because nothing indicated (sound, lights, drag) that the gear was down. We flew by tower banked and as we knew, tower told us the gear was not extended.

At 11:18am MS Kent and I decided we would call Shawn Bagley (previous instructor) to see if he had any ideas. Shawn didn't answer, texted him to tell him it was an emergency and he called back. We went through the procedures again with him and still nothing. Shawn said he would contact Rich Pickett (certificate # [REDACTED] a Malibu ground and flight training course instructor. While I was on the phone with Shawn, tower gave Kent a number to call, someone that might have a few ideas to try. It was Steve Rost [REDACTED] with Aircraft Maintenance. I called him while Kent flew the circles. It was hard to hear because I couldn't get the Bluetooth to work with my headset. Steve had me check the lights again to make sure that all lit up on the annunciator panel. They did. And he had me run through the emergency checklist again. Again nothing worked. Steve had us try a few maneuvers to get the gear to drop. We tried fishtailing the aircraft, G loading the aircraft, and we aggressively pulled on the emergency gear extension handle. Still nothing. Steve said that he would try to call Piper Aircraft and would call us back.

Tower then asked us to fly to a different airport RE D-Hillview of Santa Clara County (KRHV) to minimize disruptions. Tower asked us to maintain 1500 ft altitude and we circled above the airport. At around 11:58 Steve called us back with Piper on the phone. Piper went through a few of the checks again. We kept getting disconnected due to the service and it was hard to hear. I called Steve back. Piper was still on the phone and Piper asked if we had a Phillips-head screwdriver because they wanted us to pull up the floor board between the front seats and locate the valve. We happened to have some tools on board and found two screwdrivers (a little black stubbie and a log yellow interchangeable bit type screwdriver). Kent continued to fly while I went to work. I pulled up the carpet and began to remove the screws that kept the plate down. I took over to get the screws out.

At around 12:18pm MS I got the floor cover off and started looking for the valve. I couldn't find it and couldn't hear really well where it was located. So I sent a picture to Steve of the compartment by text message (see fig 1). I called him back and he said the valve wasn't in the picture but I needed to look up to the right. I found the valve and pushed the emergency gear pull in and out to make sure I had the right valve (see fig 3). I asked Piper if the valve needed to slide forward or backward. Piper said forward and after pulling on the emergency pull handle some more confirmed as well that it needed to go forward. I put a screwdriver in and started to pry the piston while pulling on the emergency pull (see fig 2). I couldn't get the piston to slide out (towards the front) to save my life. I used all kinds of things to pry on it. Piper told me that there was a lot of pressure 1500 psi but I should be able to move it. I asked Piper if I could just poke a hole in the line to relieve the pressure so the gear would drop and Piper advised me not to. I would spray hydraulic fluid all over the cockpit and was a liability and they couldn't advise me to do it. I flew for a few circles while Kent tried to pry with the POH and the screwdriver as well and still nothing. I couldn't get it. Due to fuel levels being around 10 gallons we felt we needed to head down to a gear up landing.

Kent and I decided to get out the emergency landing checklist in the Simcom book (the emergency descent and power off landing checklists). We came up with a good plan: flying the plane as slow as possible and we would flare and stall just before touch down. We decided it was best to have Kent fly it in because he was a more experienced pilot, and I would be in charge of following the shutdown procedures (located in the Emergency Procedures Handbook tab 4) prior to touch down. We decided I would do this at an altitude of 50 ft. We briefed the passengers on how to open the door and to brace themselves. I then called tower and asked for clearance to land. Tower gave us clearance to land on runway 30L. We started our inbound approach.

We executed the plan. We flew the plane in at a controlled decent rate of around 500 ft per minute. I shut down the engine and all power. Kent flared at about 60 feet above the ground. Just before touchdown we experienced a stall with a slight right wing drop. Kent corrected the best he could and we touched down and slid between 300 ft and 500 ft to a stop. Just as the passengers were trained they opened the door and exited the plane and we followed after making sure all power and fuel were shut off.

We then spoke with the first responders, airport management and the AA. The plane was picked up by Orkitt. After Steve Rost unsuccessfully tried to pry the same valve that we had, he was able to get the gear to retract by loosening a nut on the hydraulic line. The plane was towed to a hanger. At the hanger Steve asked if the plane had been through a recent annual. He said it the gear is not dropped correctly using the emergency valve during annual inspection, especially the nose gear, it can cause damage to the valve and may have been why the valve was jammed. In summary we did everything in our power to fix the plane in the air by calling Piper, Steve Rost, Shawn Bagley (past instructor) who called Rich Pickett (pilot certificate # [REDACTED] Personal Wings NC a Piper Malibu Ground & Light training course in aircraft). The plane is still currently located at the San Jose Airport. SEE attached PD or pictures referenced.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This is a problem that other PA46 have hand and all though there haven't been deaths from this I feel the problem is big enough for it to be a mandaitory AD. I have found a few other belly landings of PA-46's do to the same problem. John Walther [REDACTED] is one of the individuals that has had this problem happen to him twice.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Hydraulic pump wouldn't turn on with gear leaver in down postion and gear wouldn't extend.

Emergency Gear extesion wouldn't work. See Attaced Video.
