Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Tail rotor damaged, tail boom wrinkled, R & L skids compressed, Engine? No other physical or property damage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in Ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Date & time of incident: 04/06/2020 at approximately 2:15pm.

At approximately 2pm, I walked out to the helicopter, and preflighted the helicopter: oil was 6 3/4 on the stick, all fluids normal, clutch & belts good, all cockpit checks were normal.

I started the engine, it ran a little rough for a second or two and then cleared. I warmed up the engine, performed Magneto check and Sprag clutch check. I checked hydraulic controls, governor check, checked low RPM horn. All checks were good so Cleared the area.

Pulled into hover, moved away from platform, called tower for a departure clearance. I was cleared to depart North.

At approximately 30-40' and 30 knots I heard and felt a "Bang" in the engine area, a second later I saw then heard the low RPM light and horn go on.

I dropped the collective, entered an Autorotation, then banked left to line up with taxiway Alpha at KHIO.

When I was close to the ground I flared and contacted the skid and tail rotor with the taxiway. The helicopter skidded straight and then nosed to the left.

When the helicopter stopped skidding, the main rotor was still turning, I then used the rotor brake to stop the rotation, turned off all electrical switches and mags.

I opened the door and got out of the helicopter. After getting out of the helicopter, I walked around the helicopter to assess the damage and check to see if any fluids were leaking. I did not observe any leaking fluids.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Suspected engine failure. Drive belts all appear to be intact. (Acraft not yet released to inspect). Loud bang immediately followed by low RPM warning.

17.25 hours since 50 Hr inspection.
