Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

No known property damage, forced landing in the Columbia River. Only damage witnessed to the aircraft before it sunk was damage to the right wingtip and aileron. Potentially aircraft destroyed based upon submersion.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

During pre-flight planning the morning of the flight, I calculated that there should be 33gal total, 26gal usable fuel on board the airplane. When I arrived at the hangar, I noted the airplane to be in good physical condition with no signs of leaks that occurred while I was on a 6 week military deployment. I conducted a thorough pre-flight of N8359D, I noted visually that the fuel tanks had the following amounts of fuel:

Left aux tank was approx 40% full
Left main tank was approx 50% full
Right main tank was approx 60% full
Right aux tank was approx 60% full

which matched my fuel calculations. I sumped the fuel tanks/lines/selector valve noting clean fuel with no water then lubed airframe hinges with LPS 2. I checked the engine oil level which was at 9qts. I noted the tach time when we boarded the aircraft was 2493.15. The fuel selector valve was set to LEFT MAIN. The engine runup was uneventful. My passenger and I departed KTTD on May 17, 2020 at approx 11:15PDT. As I called for taxi, Troutdale ground informed me that runway just switched from 07 to 25. I accomplished a normal VFR takeoff on runway 25 and right downwind departure was accomplished. I leveled off at 1,100' MSL and I set the propeller to 2450rpm, throttle to maintain approx 120KIAS, around 15"MAP, and mixture to attain approx average 1330deg CHT, well rich of peak. We flew NE up the Columbia River Gorge on a pleasure flight at generally 1000' AGL, 7 gal/hr, 120KIAS. I switched the fuel selector valve to AUX approximately 15 minutes into the flight. We turned around approximately near Lang State Park to fly back to KTTD. I wanted to familiarize myself with Cascade Locks State airport as it is in my home area and I consider it a divert airfield. I tuned to the CTAF frequency and announced my location and intentions to accomplish a low-approach to RWY 24 noting light and variable winds and no traffic. I set up for a 2 mile straight-in and saw a human standing on the north side of the runway approx 2/3 to 3/4 down. I decided to leave my landing gear retracted and leveled off at approx 100' to avoid any sort of conflict and to avoid scaring the person. I selected approx 60% flaps and overflew the runway noting the person crossing under the aircraft's nose to the south side of the runway and into the grass. I thought it was odd that the person did not look up until I flew abeam the man who then glanced up before disappearing under my left wing. The young man was dressed in all black with strawberry blonde hair and beard, sunglasses, and carrying something that looked like a camera. After overflying his relative position, now about 3/4 down the runway, I advanced the throttle to full and selected flaps up as the aircraft pitched up into a climb. Approximately 1 to 2 seconds later, I felt a lack of acceleration and the engine volume decrease. I immediately leveled off and moved the fuel selector valve from AUX to RIGHT. I scanned ahead for a suitable landing sight. Without looking down, I pushed the throttle, mixture, and propeller levers to full forward, noting not much movement as they were already full forward or close to it. I was aligned with the rocky shoreline and decided that turning left or staying straight would not be suitable landing areas. I immediately pushed the yoke forward to ensure flying airspeed and rotated the yoke gently to the right to avoid the shoreline rocks and approaching jetty. I selected flaps down and began the flare while rotating the yoke to the left to level the wings. We touched down and decelerated rapidly with the landing gear retracted. I asked my passenger if she was okay to which she answered, "Yes." We unbuckled our restraints and I noticed water at my feet. I reached over with my right hand and rotated the door handle and pushed the door open. I quickly glanced inside the cockpit looking for my iPhone. I couldn't find it and we egressed to the right wing, standing. We assessed our location and a fisherman on the jetty holding a large fish offered to cast a line to us but the aircraft was sinking too rapidly. My passenger and I entered the water and swam approx 20 yards to the jetty and sandy beach. We were greeted by Samaritans. I turned around to see the empennage and V-tail oriented vertically into the air, the rest of the aircraft was submerged. Paramedic first responders began assessing our condition and we entered an ambulance and were transported to Legacy Mount Hood Emergency Room where I was treated for minor injuries.

This statement was made to the best of my recollection. Any errors are completely unintentional.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Unknown. Need engine failure mode to provide a recommendation.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Assumed. Unknown loss of engine power. Complete engine information above.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

- Weather information at incident location (above) is from pilot observation / recollection.
- Altitude of occurrence is an estimation (300' MSL, 149' AGL). It might have been lower. Probably not any higher.
