Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

On landing we struck a fence post and took off about three feet of the tip of the right wing.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

Here is my statement regarding my emergency landing while piloting a Piper Twin Comanche (PA-30) Tail Number N8488Y on July 15, 2020 near Vaughn, New Mexico. I was flying from Austin Bergstrom Airport in Austin, TX enroute to Santa Fe Municipal Airport, Santa Fe, New Mexico.

I was the pilot in command and the only other passenger was my wife, Rosemarie Lovell who was riding in the right front seat of the airplane.

The airplane was filled with fuel on Tuesday, July 14, after one of my partners returned from a trip from Angel Fire, New Mexico. I have a copy of the fuel receipt for the fuel that my partner purchased on Tuesday after returning to Austin showing that all four gas tanks were topped off. My partner also confirmed that he checked the fuel after the tanks were topped off and they all were full.

My preflight on Wednesday morning found no problems and all the fuel tanks were full. This airplane has a total fuel capacity of 90 gallons. On each inboard tank (of which 27 gallons are useable), and 15 gallons on each auxiliary tank (all of which is useable). The entire trip I was VFR and in contact with various center and approach controllers with flight following.

We had a normal take off with no problems until we got about half way between Roswell and Santa Fe, after flying for approximately three hours and fifteen minutes at an altitude of eight thousand five hundred feet.

At about 11:15AM (Mountain Standard Time) The right engine began to serge a few times and then quit running. I then called Albuquerque Center and advised that I had lost my right engine and that I was making a left turn back towards Roswell knowing that I had rising terrain ahead of me if I continued to Santa Fe. It became obvious that I could not maintain my altitude due to the lost engine and that making Roswell was out of the question, and that the Vaughn Airport was also not a good option due to it's distance. The single engine service ceiling for this airplane (at 3,600 pounds Gross weight) is 5,800 feet. The single engine absolute ceiling (at 3,600 pounds gross weight) is 7,100 feet.

I notified Albuquerque Center that I was going to make an emergency landing. I took the airplane to a landing on terrain (at approximately 6,300 feet) that was somewhat uneven and hit a fence post that took off a few feet of the outside of the right wing.

The aircraft remined upright and there was no fire. My wife and I exited the aircraft without injury.

We went to a near by house and were able to contact Albuquerque Center to advise them that we were safe.

I know that the airplane was full of fuel when we departed Austin and that I was burning about 8 1/2 gallons per hour on each engine for a total of 17 gallons per hour.

The New Mexico State Police and the Vaughn Fire Department arrived and after they completed their investigation my wife and I went on to Santa Fe via rental car.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The aircraft fuel system for the right engine should be checked to determine where the fuel leak was.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Not sure if there was a mechanical malfunction. It was a fuel problem.
