

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Jamul State: CA
 ZIP: 91935 Country: US
 Latitude: _____ Longitude: _____
 (Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 07/22/2020 Local Time: 7:15 pm
 mm/dd/yyyy Time Zone: Pacific

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: 125 MC
 Manufacturer: Tomas James
 Model: Montana Coyote
 Serial Number: 1001
 Year of Manufacture: 1991
 Amateur-Built: ☒ Yes ☐ No If Yes: ☒ Kit/Plans ☐ Original Design Make: Montana Coyote

☐ IFR-Equipped and Certified
☐ Commercial Space Flight
☐ Unmanned Aircraft

Maximum Gross Weight: 1600 lbs
 Weight at Time of Accident/Incident: 1550 lbs
 Number of Seats: 2 Flight Crew Seats: _____
 Cabin Crew Seats: _____ Passenger Seats: _____
 Number of Engines: 1

Category of Aircraft

Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Bent Propellor
 Broken Tubing on left main gear
 Dent in wing strut
 Damaged left wing tip

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Kirk Phaff and I made 2 short, approximately 1/2 hour flights on July 22nd 2020 in 125MC. The first flight was uneventful and consisted mainly of touch and gos at Nichols field. At the end of the first flight we landed just long enough to take on 12 gallons of fuel which topped off the wing tanks at 24 gallons total. When we took off again at approximately 6:45pm local time, a slight loss in the rate of climb and attributed it to the extra fuel weight. We had planned to fly to Brown field, approximately 7 miles to the South West, but decided to do some recreational flying before heading to Brown. Approximately a half hour into the flight, I noticed about a 200rpm loss of Rpm followed by an immediate return to full power. I asked Kirk if he noticed it and he replied, no. At that time the engine came to a complete stop. I glanced at the mixture control which was still at full rich and then began looking for suitable landing

sites. At the time of the engine out we were approximately 700 feet above cow pastures which were in rolling hills. The plane was dropping very quickly and we didn't have much time to plan for our landing. The whole time from engine failure to touch down felt like about 30 seconds. We both looked left and right. Kirk pointed out several dirt roads, but to me, they didn't look straight enough to land on. The meadow directly in front of me looked as good as any of the others, so I continued straight. When I was approximately 100 feet AGL I put in full flaps. As I was working my final approach I noticed power poles on the left and a barbed wire fence on the right and planned to land between the power poles and the fence. After lowering the flaps, I began to notice the tops of boulders sticking up above the tops of the 4 foot tall weeds directly ahead of me. I veered approximately 20° to the right to avoid them. At this point, I was so low that the tall grass was obscuring the fence and I lost sight of it. I touched down tail wheel first fully stalled. The airplane rolled approximately 75 feet before hitting the fence posts which I had seen from the air. At this point, the left main gear collapsed, the plane skidded about another 25 feet and stopped at about a 90° angle to the direction we had been travelling. We exited the airplane to survey

the situation. We noticed the damage to the left wing tip caused by the collapsed landing gear and the bent prop. We then began to plan the best way to get back to the airfield. As we were about to walk away, Kirk asked me to check to make sure we had turned everything inside the plane off. I noticed the master was still on and flipped it off. At this time, a Sheriff's helicopter flew over and noticed the plane on the ground and came in and landed.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I feel that I did the best I could under the circumstances. The problem was the engine failure and I'm not sure what caused it to fail.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Lycoming 0320
Engine completely shut off during
the flight

Total Time/Cycles
