Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft was destroyed from near vertical impact through trees

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Pilot and Instructor departed KBFI morning of 11/11/2020 assumed on an IFR flight plan to KBLI. They apparently arrived there and landed. They departed KBFI approximately 11:10am on an IFR flight plan to KBFI. I do not know the specific conditions of the flight, if they were in IMC or the other conditions of the flight. Based on Flight Aware data, at 11:29am they were at 6,700-ft on a heading of 184 at 137 knots when they began a decent reportedly due to an unidentified issue with the engine. They also made a turn to the southeast apparently turning towards W10, Whidbey Airpark. At 11:43 they were heading at 90 degrees, apparently at or over the field at 1,400-ft. They made a turn to the north. The Flight Aware data ends at 11:44am with the aircraft on a heading of 12 degrees at 400-ft at an airspeed of 58-knts. I am aware that another flight from KBLI proceeded the accident aircraft in VFR conditions and landed at W-10 approx. 10-minutes prior to the accident in VFR conditions. There was a report from a ground witness that the propeller was not turning and there was no engine sound.

The report is that the airplane impacted the ground in a near vertical position in trees on the east side of the field approx. 2/3 up runway 16. There was no damage to persons or property on the ground. There was no post impact fire.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

With an engine failure at altitude, using GPS to attempt a landing at the nearest airfield, may not be the best alternative. A controlled off-airport landing provides more opportunity for occupant safety than maneuvering to or at an airfield at low altitude and low speed.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Unknown at this time. There was a report from a ground witness that the propeller was not turning.
