

Introductory Training Flight

Total Time
1.0

Scheduling & Logging

Scheduling: Accomplish this lesson in 1 flight.

Logging: Log the full duration of the flight under the Single-Engine and Total Duration columns of the student's logbook.

Remarks and Endorsements: Demonstration Flight

Objective

Introduce the prospective student to the exciting world of aviation, and determine if they demonstrate an attitude and ability to be successful in the Airline Career Pilot Program.

Elements

- ☐ **GROUND**
 - ☐ Complete Flight School Agreement
 - ☐ Provide "Getting Started" Brochure
 - ☐ Conduct Admissions Flight
 - ☐ Debrief Flight
 - ☐ Verify "Getting Started" Brochure Provided
 - ☐ **Complete Introductory Training Flight / Tour Form**
- ☐ **FLIGHT**
 - ☐ Positive Transfer of the Flight Controls
 - ☐ Taxiing
 - ☐ Straight-and-Level Flight
 - ☐ Climbs
 - ☐ Descents
 - ☐ Turns
 - ☐ Motion Sickness Tolerance
 - ☐ Flying Fear Tolerance
 - ☐ Recommend for Training Program

Narrative

Thank you for scheduling an introductory training flight with ATP Flight School. We are excited to welcome you to ATP and can't wait to help you get started on the most efficient path to becoming an airline pilot.

Each ATP location is part of a nationwide network of training centers, resources, and support. You'll fly the largest fleet of new aircraft serviced by strategically located maintenance bases, ensuring maximum aircraft availability. Nationally awarded and recognized flight instructors set the foundation for becoming a pilot, while a proven airline-oriented curriculum prepares you for your career. ATP's training support department backs you at each step to keep your training on time and on budget.

Aspiring pilots starting training today will be well-positioned for a rewarding airline career. We're ready to help you capitalize on this opportunity and look forward to showing you why ATP has the highest ratio of airline placements to students of any flight school, aviation college, or flight academy.

An introductory flight is an excellent opportunity for you to get a first-hand look at training with ATP. You can expect to hear from our training support team or your assigned flight instructor before the flight. If the weather is unsuitable for your scheduled flight time, we will reschedule the event to another time that's convenient for you.

On the day of the flight, your assigned instructor will be at the training center awaiting your arrival. Please know that all ATP flight instructors are graduates of our training program and were once in your shoes, so feel free to ask them questions about their experience with ATP as well as their career goals. Before the flight, your instructor will discuss safety procedures that you will use while flying. During the flight, you will not be expected to meet any particular tolerances on altitude, heading, etc. You've likely invested a considerable amount of time researching flight training, and our goal is to get you airborne so you can determine if flight training with ATP is for you.

If you're like most who have dreams of an airline pilot career, you'll be instantly hooked after experiencing a day of training with ATP. If, however, you experience any motion sickness or fear of heights, then you should consider these feelings before enrolling with ATP. An Admissions team member will follow up with you after your flight to get your thoughts and answer your questions. Enjoy the flight!
