Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Front gear collapsed causing damage to propeller, engine, cowling, and structural damage to fuselage back to cockpit. No apparent damage to wings or tail section. No fuel spill from the two wing tanks.

No damage to other property.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

This paragraph describes the accident that occurred to N601SA at about mid-afternoon on 1 OCT 20 just east of the end of Runway 29 at Skagit Airport (KVBS). The Light Sport Aircraft was recently completed and had some trim issues at first. I was eliminating these issues, one at a time, had completed them, and made six good landings on 30 SEP 20. So on 1 OCT 20 I was going to do some more landings in preparation for taking the aircraft back to the Oak Harbor Airport (KOKH) where I have a hangar. I had just made the first takeoff on Runway 29, and was on the pattern to land again. I made radio calls on all corners of the pattern and was just making my base to final turn for 29, when the engine quit without warning. I had time to retract flaps, make a radio call to two other aircraft in the pattern warning them that I was "engine out and trying for Runway 29." I also had time for one engine restart attempt, which was a failure. The aircraft came down in a small field outside the perimeter of the airport property, skidded for about 100 feet, went into a drainage ditch, and came to rest half-way across Higgins Airport Way, facing approximately west, in line with Runway 29. I was the only occupant of the aircraft and was uninjured, with the exception of a minor sore back. The aircraft appeared to have severe damage to the front landing gear (which collapsed), causing further damage to the cowl, propeller, engine, and forward portion of the fuselage. There did not appear to be damage aft of the cockpit to the tail section. The wings were intact and never touched the ground. The two wing tanks were intact, and no fuel spill occurred. There is about 7/8 fuel in the right wing tank and about 1/4 in the left. I was running on the right tank. Before exiting the aircraft I turned all electrical including Master switch off and turned the fuel selector from right to off. The ELT went off and was silenced by one of the Airport Personnel. No parts departed aircraft, except one carbon fiber propeller blade, which was recovered. The aircraft is presently tied down in front of the Corporate Air hangar.

RECOMMENDATION

Operator/Owner Safety Recommendation

I will notify NTSB as soon as I determine the cause of the engine failure.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
