Provide as much detail as possible.</p> <p>Incident flight began at Cottonwood Municipal Airport (P52) at 1902 MST after flight from AZ48 in twilight conditions. Flight to P52 was solely to fuel the aircraft. Pilot noted after liftoff from AZ48 that indicated airspeed was suspect, which he attributed to pitot probe cover being missing on preflight inspection. (Pilot later found the pitot probe cover on the ground where the aircraft had been tied down, no doubt due to strong wind in the area since last flight.) Flying with reference to engine RPM and vertical rate to maintain what he felt to be normal cruise speed, the pilot proceeded to AZ48 over essentially flat terrain. After circling the airfield location and activating the pilot-controlled runway lights the pilot positioned the aircraft for a straight-in approach to AZ48 Runway 05. At sensing higher-than-optimal height above the runway, the pilot lowered full flaps and reduced power. At the runway threshold he felt he had achieved a proper height above the surface and reduced power to idle. Upon clearing the "numbers" he increased pitch attitude. However, he flared slightly too early, struck the runway surface firmly while still too fast, the aircraft bounced, returned to the surface and slewed rapidly to the right in the beginning of a ground loop, causing the aircraft to depart the runway surface approximately 800 ft. past the landing threshold. While inspecting the aircraft for damage later in daylight the pilot noted the airspeed indicator needle stuck at 89 mph. which, if accurate might explain a 19 mph. excess speed and resultant loss of control.</p> <p>He was wearing his restraint harness and uninjured. He turned all switches to "off" and departed the aircraft by opening the undamaged pilot side door. An occupant of the residential airport observed the incident and, without first determining the extent of injury, if any, called "911." This summoned the Copper Canyon Fire District crew from their station a half-mile from the airport. They conducted a basic physical condition examination of the pilot and confirmed the lack of injury. The call to the fire department also attracted a Yavapai County Sheriff's deputy who took the photos of the aircraft which have been forwarded to the NTSB.</p> |                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                        |

**RECOMMENDATION** (How could this accident/incident have been prevented?)

## Operator/Owner Safety Recommendation

This incident would not have occurred if the pilot had deferred his positioning flight to top off the plane's fuel tanks to the following morning. He had planned to make a necessary visit to his bank's ATM in Camp Verde, 10 miles from his home, return to his home one mile from the AZ48 airport and perform the fueling flight to and from P52 while daylight remained. However, the bank's ATM being out of service required him to drive 12 miles to Cottonwood, Ariz. where he used the ATM of his bank there. This delay left him only enough light to take off from AZ48 and get to P52 at dusk.

The two factors that led to the incident were the bank's ATM unavailability and the unreliability of the aircraft's airspeed indication. They combined to put me over AZ48 in darkness and lack of confidence in the indicated airspeed led to a higher than normal speed in the touchdown phase. This in turn led to the bounce and resultant departure from the runway.

Summary: Pilot Error in making the flight under the circumstances described above.
