Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Right wing sheered off. nose wheel and right main landing gear sheered off. Street sign knocked down

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

After doing a runup and preflight with no abnormalities, we took off from Shady Acres(3B8). Enroute to KPLU to do touch and goes, we did a quick turn around a point so I could show my CFI a piece of property I'm in the process of purchasing while listening to the AWOS at KPLU. We continued East to enter a Left 45 entry for a left downwind for Runway 17. We did a soft field landing as our first landing and rolled into a touch and go. The pattern was rather busy with 6-9 aircraft. Because of this we were running a wide pattern with 1900RPM versus 1500 until short final. We followed through the landing checklist as normal and experienced no issues. After the second touch and go, roughly 500 Agl turning left crosswind rw 17 the engine sputtered momentarily and then my CFI told me to apply full power as he assumed I had reduced the power during the climb. At this point I removed hand from the throttle to show that it was at full power, the engine came back to full power and then my CFI said "my controls" and took control of the aircraft. At this point we continued left crosswind and then the engine reduced to what sounded like a low idle. We immediately pushed the nose forward and pitched for Vg as we were a climbing turn while the engine reduced to the idle power. My CFI immediately told KPLU traffic that we were turning back final RW35 to land straight in and that we had engine troubles. He ran through a quick flow through of Fuel Selector-ON Mixture Forward Throttle Forward MAGs Both. At this point he told me to bump the starter(my ignition is separate from the mags key) to see if we'd get an extra boost of RPM. The engine was still running, but he was seeing if that would help the situation. At this point he saw the air field was rising in the windscreen and said "We're not going to make it. I'm putting us down in that dirt area and we're not hitting any houses" as he pointed to a construction zone in the middle of a neighbor below at our 6-7 o'clock (.6NM south of the airport). At this point he told KPLU radio we weren't going to make it to the field. He set us into a slip as he realized we were going to overshoot the construction zone. At this point we touched down in the dirt, but hit a bump which bounced us back into ground effect. At this point we flew threw the street and touched back down in the street before hitting a grass berm and a tree. The tree sheared part of the wing off past the fuel tank and also dislodged part of the right wing from the fuselage. At this point we rotated roughly 100 degrees to the right and collided with another tree which brought us to a rest in the parking lot. The door popped open upon impact. My CFI egressed and then told us to get out of the aircraft while also asking us if we were okay. After we departed the aircraft he went back in to shut the fuel and electrical off. At this point pedestrians walked up and asked if we were okay. 911 was called. EMS, Sheriffs department, and the fire department arrived. There were zero injuries. Fuel was dumped from the aircraft into the grass from the severed fuel line. Rough Departure time from 3B8 was 5:23 PM PST and the crash occurred around 5:40PM PST
