NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

Landed on 27 with a 20 to 25 MPH quartering crosswind - light gusts. Approx. 2:00 PM mtn

Fueled aircraft and added 1 quart engine oil, drained fuel sumps.

Check with FBO if a taxiway takeoff would be OK; they approved. - Paid fuel & oil bill.

As wind was coming straight down from 21 direction & taxing over to runway 21 would be less safe to do in a 90 degree crosswind. Taxiway runs parallel to 21 at this point.

Departed from FBO area. Tail up in 100 FT or so.

Gust of wind lifted the right wing - Aircraft did not respond to aleron input -

Aircraft left taxiway across level dirt/grass area.

Airspeed upto 60 to 65, attempted takeoff - nose went down - skidded to right as right rudder was used in anticipation of flight - turning into the wind -

My observation of the accident after the fact

Control column grip came off jamming pilot's hand between the top of the grip & aircraft structure when trying to use aleron - explains bruise on top of right thumb.

Aircraft nosed down when grip came off the rest of the way. Slight nose down trim caused the propeller strike and accident.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

This could have been prevented by businesses that worked on this aircraft making efforts to secure this grip through (at the very least) redundancy (as in more than one method) to ensure the grip could not slip or slide off; or by businesses refusing to reinstall a grip that did not meet standards for this certified aircraft.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Teakwood Standard Grip, Aircraft Spruce & Specialty Company, Part#: 11-02910-01 MFR Model#: 1308R
Manufacturer instructions per this company: "Is simply applying any silicone adhesive. That's it. It secures the wood grip firmly, but also makes it easier to remove when it's necessary." (Note: no bolts, screws, cotter pins, rivets or any other sort of securement is suggested), plus no mention of this being a non-standard grip.
Hand Grip on control stick came off causing a loss of control of the aircraft.

This grip was previously reinstalled on the aircraft, when the push-to-talk switch was repaired; prior to the aircraft purchase date of October 13, 2020. This aircraft only had 2 hours flight time after push-to-talk switch was repaired. Airframe Log notes this.
