Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Main cabin structure compromised, roof separated, all crew loading doors separated. Nose and belly section made ground contact and are severely deformed. All windows destroyed. Multiple engine and transmission panels separated. Left skid tube separated, Right skid cross tubes broken above the shoulder. Tailboom separated. All main rotor blades made ground contact and were destroyed. All dynamic parts compromised or destroyed from ground contact and/or dirt/debris/FOD ingestion.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On the evening of October 26, 2020 pilot Ken Stone from Silver City, NM while on a reposition flight, impacted terrain approximately 200 yards NW of the Whiskey Creek Airport (94E). A winter storm was approaching the area and the intent of the flight was to relocate the aircraft from the base at Gila Regional Medical Center to Whiskey Creek to place it in the company rented hangar. Night MVFR conditions prevailed with light to moderate mixed precipitation. The pilot was the only occupant and sustained minor injuries.

Prior to the flight, the pilot checked weather utilizing NWS and company provided sources. A company flight plan was filed with the Air Methods Communication center (Aircom), and a preflight risk analysis was completed. The accident flight departed at 23:34 local time. The pilot described VFR conditions upon departure and enroute, but noted the precipitation turned from rain to snow as he approached the airport. The flight followed along Hwy 180 east, and turned final approximately 1 mile north of the airport. On the turn to final, the pilot reported an increase in precipitation, and a reduction in visibility. The aircraft impacted terrain in a level, or slightly nose-low attitude approximately 200 yards NW of the airport at 23:37 local. Company post-accident notification process was initiated immediately after the accident.

The aircraft sustained substantial damage and came to rest approximately 25 feet South of a private residence. The pilot was able to self-extricate and was brought inside the residence by the occupants. Shortly after, first responders began arriving. Aid was rendered to the pilot, and he was transported to the local hospital for further evaluation.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Avoid VFR flight in conditions below VFR weather minimums. Avoid VFR night flight in areas of no illumination or surface reference in poor visibility. Maintain an instrument cross-check when operating in areas of low illumination or low visibility. When encountering areas of deteriorating weather pilots should divert, abort, land or execute the IIMC recovery procedure in accordance with company guidance.
