Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Damage to aircraft unknown to pilot at time of report. Expected to be substantial or destroyed.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I had been thermalling to the SE of Mt Diablo between Livermore and Byron, then followed lift under cumulus clouds towards Mt Diablo. A few miles short of Mount Diablo saw other glider traversing from R to L too close to avoid collision. There was no FLARM alarm. The FLARM collision avoidance system was operational in N18MA, because earlier alarms had sounded during flight. Wreckage is yet to be found at time of report.

After collision the glider entered a rapidly accelerating inverted steep dive. Pilot bailed out safely and parachuted to ground with minor skin abrasion injuries from descending through a tree.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Better lookout could help, but gliders on collision course are very difficult to see, especially without indication of direction to look. Working FLARM in all gliders (and light aircraft and helicopters for that matter) provides a timely and reliable alert system. Compared with other avionics, it is also cheap.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

Registration of other aircraft found by looking up FAA registry with name of other pilot, who is known to N18MA pilot. Wreckage of N81KP in trees was not examined by reporter, but assumed to be destroyed.

Altitude determined from FlightAware ADS-B trace. This may be pressure altitude rather than above MSL. On this day would indicate higher. Ceiling determined by adding estimated cloud clearance to altitude.
