Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The spinner is cracked, both propeller blades are damaged. The engine is seized in position. The nosewheel is sheared off, the firewall is bent, both main gear are bent backward. The right wing has impact damage to the leading edge center, wingtip and flaperon and inboard skins top and bottom. The left wing has damage to upper and lower inboard skins. the center landing gear box section of the fuselage is twisted and bent upward with signifanct damage to the baggage floor and bottom skins. The cowl upper and lower sections are damaged, the cowl cover panel is damaged and there is impact damage on the right fuselage just aft of the wing.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

Upon takeoff from RW23 at C83, I was climbing out and my engine failed at 545 MSL (466 AGL). I immediately initiated a left hand turn back to RW5. Wind was 230@18G23, so take off was easy, but returning to land downwind was challenging my RV12. I announced on CTAF "engine failure and returning to land dead-stick runway 5" I successfully performed a 180° turn and lined up for landing, which required significant cross-control (forward slip) to align with the runway. With an airspeed of 65KT (best glide) and a gusting tailwind, my groundspeed back to land was increased by the gusting tail wind to approximately 85-88KTGS. Having no ability to go around and concerned I would run off the end of the runway, I landed and braked hard and was slowing straight on the runway, but then received a gust of wind that lifted my right wing and I departed the runway on the left side striking a taxiway sign and coming to rest just beyond the sign. No injuries occurred. The FAA and NTSB were notified.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The option to land straight ahead was limited by rising mountain terrain and windmills. I performed all actions as I have practiced and would do them the same if another engine failure occurred. Completely mitigating the accident would require no engine failure.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

UL Power engine model UL350iS, S/N 135001. Cause of failure is TBD.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

Prior to take off, normal preflight checks were performed and all indications were normal. Aircraft fuel capacity is 20 gallons with an hourly fuel consumption of about 5 gallons. Fuel pressure and flow, oil pressure and temperature were normal at the time of failure and all cylinder head and EGT's. Both ignitions were on and the primary fuel pump was running.. Engine stoppage was immediate from full power. A data file from the G3X Engine Information System has been provided to the NTSB. An external inspection showed no immediate indication of failure such as obvious cracks, breakage or oil leaking from the engine. The oil cooler was damaged on impact with the taxiway sign such that it leaked oil.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
