NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On November 21, 2020 I departed KU42 with five passengers for our destination of KTRM. I climbed to 10,500 feet and all operations were normal. Just before reaching Las Vegas I noticed a slight roughness in the engine that lasted about 10 seconds and then seemed normal again. I checked all the gauges and noticed that #2 cylinder had dropped from 1350 degrees to 650. I also noticed that the airspeed had dropped about 23 knots. All other gauges were normal and the only effect was the drop in airspeed. I decided to continue to my destination and would have a mechanic check the issue there.

Just before the TNP VOR I again felt a slight roughness in the engine and then it seemed to be ok. I decided to switch to the right tank which was the fuller tank. After switching tanks the engine stopped and did not start back up. I have had this experience before since the knob passes through the off position to get over to the other tank so I was not concerned about this. However after 30 seconds or so it still hadn't started back up so I depressed the auxiliary fuel pump and the engine immediately started back up. At this point I decided to descend to the KTNP airport and have a mechanic check the problem to see if the fuel injector was plugged or find out what was happening. The descent and approach to the airport was normal and felt like I still had full power. I made a normal landing and proceeded over to the airport building. I discovered that the airport was unattended so I called a number listed in Airmav and talked to a person who informed me that there were no mechanics in the area.

At around 12:00 pm PST I added 35 gallons of fuel at KTNP and decided to proceed to my destination at KTRM to have one of the mechanics there check the problem. I did a preflight check of the plane and did a run up of the engine to 1700 RPM as prescribed in the owners manual. As I switched from left to right mags everything seemed to check out ok. I entered runway 26 and proceeded down the runway. As I reached halfway down the runway I felt a slight hesitation in the engine and decided to abort the takeoff. I taxied off of the runway and decided to go through the same procedure once again to see if I could detect any problem. All of the run up checks appeared to be normal and I could not see any problem with the power. I entered the runway again and proceeded down the runway. The power appeared to be solid all the way so I started to lift the nosewheel off about 65 to 70 knots. As I started my climb everything still seemed normal. Once I got to about 250 feet I felt a loss of power and found that I could not climb or even maintain altitude. I started sinking and could tell that the plane was going down. Most of the area was desert but I could see a house straight ahead so I made the slightest possible turn to the left that I could make to avoid the house and we then descended into the ground and impacted the sand where I hit what appeared to be a berm or large mound of sand which flipped the plane over and we came to an abrupt stop. I turned off the mags and switched the gas to off to make sure that there would be no fire. All of us evacuated the plane. We all walked away from the accident with no major injuries and just a few minor cuts and scratches. Fifteen to twenty minutes later the Sherriff's dept. arrived to take the report.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

All indications were that I still had plenty of power to take off and continue to my destination where I was going to have the problem checked. After going through this experience, I can see now that if there is any problem at all whether perceived as minor or major, the issue should be resolved before proceeding.

If I were in the same set of circumstances again, I would not proceed to the destination until all issues were resolved even though it appeared that I had the necessary power to complete the flight.
