Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft came to rest on its back, propeller, wings and fuselage are bent including rudder. Tires and wheels separated from aircraft.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

Westward landing attempted on ridge, sun partial blocked vision and I deviated slightly off course, landing on a slope instead of intended touch down point. Based on marks on ground viewed post accident by others, after touchdown and initial rollout, the plane began turning to the right with left wing low due to slope. Left wingtip contacted the ground and turned the plane to the left and pointed it down hill. Pilot added power to correct, however plane kept traveling downslope making several bounces then struck several low rock outcrops before stopping inverted in the ravine. Power addition allowed plane to track across the slope at ~45 degree angle. Without power, the plane would have traveled straight down the slope and that would have resulted in higher impact forces at the bottom of the slope.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Be aware of sun obstructing view. Pilot was not well hydrated as a contributing factor.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
