Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

right wing crunched about a foot, right side elevator knocked off, nose gear collapsed, bottom of nose scuffed, two parked cars back windshields scattered & dented on left side

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

In preparation for landing, I dropped my banner on runway 6, applied full power to join the pattern for runway 6 and on short final, I made the decision to conduct a go around due to extreme wind shear I was experiencing.

I performed a standard go around procedure; applied full power, turned off carb heat, and set my flaps back to 0 degrees. I then attempted to climb back up to traffic pattern altitude.

On my left crosswind for runway 6, I encountered engine sputtering and I lost about 40% thrust. I immediately ran through my emergency checklists and was unable to correct the engine sputtering issue. Accordingly, I determined that I was going to have to attempt to force a landing on runway 24 and continued my left turn back to runway 24 with the intent to land.

Unfortunately, my tail wind was too strong and gusty and my ground speed far exceeded safe landing speed on runway 24. About halfway down runway 24, I determined it would not be possible to land safely and that I would not survive an attempted landing if I forced the plane down. Accordingly, I aborted the runway 24 landing attempt and used the remaining engine thrust available, which I estimate was about 40%, to execute a right turn back to runway 6 which had favoring winds.

At that time, my engine continued to sputter and I continued to run through my emergency checklist for engine failure. Unfortunately, I was losing thrust by the second.

By then, I was on a base leg for runway 6 when I experienced complete engine failure and that is when my propeller completely stopped spinning. At that time, I tried to restart my engine, however, it failed to restart and during the normal restart procedure, the propeller would not spin at all. After the second try to start the failed engine, I determined that my engine was not going to restart.

By that time, I was about 300 ft AGL and was over no fields or roads. However, I located a road approximately 45° perpendicular to runway 6 that I attempted to glide to. I did not see any vehicles driving on the road and I attempted a normal landing to try and avoid damage to the aircraft. Unfortunately, my elevator was ineffective due to what I believe was a result of a collision with a tree on my descent and I had no flare motion available.

When I put the plane down on the road, my nose gear immediately collapsed upon impact, and the plane skid approximately 500 feet. When the plane stopped moving, I determined that I was not injured and immediately exited the aircraft. I ran away from the plane assuming it might catch fire. Thankfully, the plane did not catch fire and there were no ground injuries. However, the plane's wing hit two parked cars on the side of the road shattering both windshields.

Immediately after the crash, a car drove by and offered to call 911.
