Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Main rotor blade contacted the tail boom and ripped it open. It did not chop the tail boom off. See attached photos.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Take off was at approximately 1430 Mtn. time by requesting the Yankee 2 traffic pattern (LOA helicopter traffic pattern). The intent of the flight was to perform autorotation training. We performed a number of autorotations including straight in and turning. After approximately 1 hour, I discussed with the Pilot about Rotor control and using the flare to build rotor prior to touchdown. We took off to perform one last autorotation with turn. During the flare I noted the rotor and commented that the rotor had recovered much better than the previous maneuver and failed to recognize that the aircraft was in a nose high attitude. The aircraft touchdown was not hard or aggressive but as the aircraft rotated forward onto the ground the main rotor blades flexed down and contacted the tailboom causing sheet metal damage to the tailboom. I remained at idle and notified tower that I was shutting down on the Echo Ramp. I exited the aircraft and observed the damage and contacted the Chief Pilot per company procedure and then notified maintenance personnel. I firmly believe this incident was solely due to pilot error and not mechanical failure.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Chief pilot will perform a post incident flight with Mr. Lacy and provide additional training. This will include special emphasis on leveling the aircraft during touchdown autorotations and not contacting the ground with a nose high attitude.
