Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Right wing has multiple leading edge dents and tip has substantial impact damage. Right side of cowling and wing to body fairing were contacted by front bumper of car. Single blade of propeller has a forward curled tip. Nose wheel assembly was sheared off to the right side of aircraft. Tail tie-down and tail-cone contacted ground. Minor damage noted to main landing gear doors. Lexus vehicle has substantial damage to trunk and back window, rear bumper is torn but still attached, dents along left side top of car. Front end damage upon contact with aircraft.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I am the pilot of a Mooney M20E N3254F departing 7L from Livermore Municipal Airport. I experienced abrupt total engine failure on take-off; at approximately 100 FT AGL, I was able to glide to a Highway overpass to land, striking a ground vehicle. The turn to the overpass seemed the safest and closest spot to land with minimal risk of damage to life and property. After leaving the ground, I retracted the gear, and the engine failed soon after; after noticing the engine failure, I looked down to verify the Mixture, Prop; the throttle was all in the take-off position as well as the Boost pump was on for take-off and landing per the operator's handbook. I was focused on maintaining positive aircraft control. The forced landing options were not good. Straight ahead was dense residential; to my right were industrial complexes, the left Downwind departure Livermore tower ATC assigned was my best option, and A highway overpass was my chosen spot to land. I had the energy to make a clearing on the overpass to glide to a landing. After landing was assured, I moved the landing gear down for landing. After making a smooth rollout, I quickly approached a ground vehicle and didn't have enough braking energy not to strike it from the rear. I was not airborne at the time of the impact with the ground vehicle. The aircraft was undamaged at the time of touch down before the collision with the automobile. The automobile was the cause of the damage to the aircraft.

Some actions I took. After take-off, I retracted take-off gear; soon after power loss occurred, I saw residential on the departure end of 7L and opted for a left turn to what I saw as an open stretch of pavement; I aimed for that and noticed I was coming in fast because of the lack of flaps, right before touchdown I extended the landing gear and set it down and prepared for impact with a ground vehicle. Since the ground vehicle was in motion, it helped to absorb the impact energy. The ground vehicle then seemed to accelerate. The aircraft struck the vehicle on the wing tip pivoting the plane around. The Nose gear collapsed after being sideloaded. Because the right-wing catching the automobile again brought the plane around to pivot in front of the automobile, thus causing all of the structural damage to the aircraft not caused by the landing.
