Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft hull destroyed due impact with ground post crew ejection. Post impact fire.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

This is a brief synopsis of the general scenario from organization CEO after having talked to the crew at the mishap site.

The aircraft crews have written or are working on their own statements that will be submitted to the NTSB as soon as complete. The mission was a standard curriculum Jet Spin Data sortie in a MB326 Impala that has been done here at the school several hundred to a thousand times. Prior to the day of the sortie there had been a test safety and data card review with the instructors and on the day of the sortie a full mission briefing including a test hazard analysis (THA) review. The aircrew was working in conjunction with a student/instructor ground crew in the telemetry room. The sortie was progressing normally over a remote area of Edwards AFB used for spinning and they were on test point #13 of 14 planned test points but had determined that it would be the last point due to approaching bingo fuel. It was planned to be a left inverted 3 turn spin using a NASA Standard spin recovery. It was the 2nd of 3 planned inverted 3 turn spins on the data card for this mission. The 1st inverted spin test had been previously completed successfully. The point proceeded as planned and predicted until recovery was initiated at which point the aircraft did not recover and the crew noticed that the aircraft did not appear to be behaving "normally" and appeared to accelerate in the spin and increase negative G. After the student was unable to recover the instructor tried to recover with no success. The instructor continued to attempt to recover until they reached mandatory bail out altitude at which point they ejected from the aircraft student first and then instructor. They landed safely on the ground at a significant distance from where the aircraft impacted. They were reached first by fire and military police crews from Edwards AFB, then NTPS Helo crew, then EMS crew, and finally Life Flight assets and crew that took them to the hospital.
