

# NATIONAL TRANSPORTATION SAFETY BOARD

## NTSB Form 6120.1

### PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

Email the pilot/operator aircraft accident/incident report to the investigator-in-charge of your accident/incident. If email is not available, mail the report per the instructions below.

If your accident/incident occurred in Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Mississippi, Alabama, Georgia, Florida, the District of Columbia, Puerto Rico, or the US Virgin Islands, send the form to: NTSB, ERA, 45065 Riverside Parkway, Ashburn, VA 20147.

If your accident/incident occurred in Ohio, Michigan, Indiana, Wisconsin, Illinois, Minnesota, Iowa, Missouri, Arkansas, Louisiana, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Colorado, or New Mexico, send the form to: NTSB, CEN, 4760 Oakland Street, Suite 500, Denver, CO 80239.

If your accident/incident occurred in Montana, Wyoming, Idaho, Utah, Arizona, Nevada, Washington, Oregon, California, Hawaii, or the territories of Guam or American Samoa, send the form to: NTSB, WPR, 505 South 336th Street, Suite 540, Federal Way, WA 98003.

If your accident/incident occurred in Alaska, send the form to: NTSB, ANC, 222 West 7th Avenue, Room 216, Box 11, Anchorage, AK 99513.

Rules pertaining to notification of aircraft accidents and incidents, as well as overdue aircraft are found in 49 *Code of Federal Regulations* (CFR) Part 830 [http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&tpl=/ecfrbrowse/Title49/49cfr830\\_main\\_02.tpl](http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&tpl=/ecfrbrowse/Title49/49cfr830_main_02.tpl). These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

#### A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

### INSTRUCTIONS TO PILOTS/OPERATORS FOR COMPLETING THIS FORM

**It is necessary that ALL questions on this report be answered completely and accurately.**

**If more space is needed, continue on a blank sheet of paper.**

**Nearest City/Place:** Use the name of the nearest community in the state where the accident/incident occurred.

**Date/Time:** Indicate the date and local time of the event. Be sure to indicate the time zone.

**Phase of Operation:** Indicate the phase of operation during which the accident/incident occurred.

**Aircraft Information:** Enter aircraft make and model information as indicated on the aircraft registration certificate, including series. If the involved aircraft is certified as "amateur-built," include the name of the producer of the kit or plans, unless an NTSB employee instructs otherwise.

**Maximum Gross Weight:** Enter the certificated maximum gross weight for the aircraft involved in the occurrence. This should be the same as the maximum gross weight indicated on the aircraft weight and balance documents.

**Engine:** Enter engine make and model information as indicated on the engine data plate.

The NTSB uses this form for aircraft accident prevention activities and for statistical purposes. NTSB regulations (49 CFR Part 830) require that **ALL** questions be answered completely and accurately. Completion of this form will take approximately 60 minutes. The NTSB does not guarantee the privacy of any information provided in this form. You need not complete this form unless it displays a valid OMB control number, in accordance with 5 C.F.R. § 1320.5(b), which applies to this collection of information.

#### B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowlings, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

**Type of Fire Extinguishing System:** If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

**Owner/Operator Information:** Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

**Revenue Sightseeing Flight:** Indicate whether the accident aircraft was conducting **revenue** sightseeing operations under 14 CFR Part 91 at the time of the accident.

**Air Medical Flight:** Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

**Public Aircraft:** Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

**Purpose of Flight:** 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

**AERIAL APPLICATION**—Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

**AERIAL OBSERVATION**—These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

**AIR DROP**—Aerial operations, other than aerial application, that are intended to release items in flight.

**AIR RACE/SHOW**—Includes any flight operations conducted as part of an organized air race or public demonstration.

**BUSINESS**—includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

**EXECUTIVE/CORPORATE**—Company flying with a paid, professional crew.

**FERRY**—Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

**FLIGHT TEST**—Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

**INSTRUCTIONAL**—Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

**OTHER WORK USE**—Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

**PERSONAL**—Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

**POSITIONING**—Non-revenue flight conducted for the primary purpose of relocating the aircraft. Examples include moving the aircraft to a maintenance facility or to load passengers or cargo etc.

**UNKNOWN**—Use only if the primary purpose of flight is not known.

**Other Aircraft—Collision:** For all accidents involving a collision with another aircraft, including parked aircraft, check "Collision with other aircraft" under Basic Information and complete this section indicating details about the OTHER aircraft involved in the collision.

**Airport Information:** Complete this section if the accident/incident occurred on approach, landing, takeoff, departure, or within 3 statute miles of an airport. Please refer to the FAA Airport/Facility Directory or other official source for airport information.

**Airport Identifier:** Provide the official 3 or 4 character airport identifier number.

**Runway:** Indicate the number of the runway used, including L, R, or C if applicable.

**Runway/Landing Surface:** Indicate the type of intended runway/landing surface (do not indicate surface conditions). If the surface type was mixed, check all that apply.

**Condition of Runway/Landing Surface:** Indicate the condition of the intended runway/landing surface. If multiple conditions existed at the time of the accident, check all that apply.

**Weather Information at the Accident/Incident Site:** Indicate the weather conditions reported at the accident/incident site at the time of occurrence. If no weather reporting was available for the accident/incident site, indicate the reported conditions at the nearest reporting site. Specify the weather reporting site identifier, the observation time, and distance from the accident/incident.

**Sky/Lowest Cloud Condition:** Indicate the height above ground level of the lowest cloud condition present at the time of the accident/incident and whether coverage was reported as few, scattered, broken or overcast. Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

**NOTAMs (D and FDC), AIRMETs, SIGMETs, PIREPs:** Describe all NOTAMs (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

**Flight Crewmember Information:** Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

**Degree of Injury:** See Definitions on the top half of Page 1 of the instructions. Minor injury is not defined. If an injury does not meet the criteria for another injury category, select Minor.

**Date of Last Flight Review or Equivalent:** Enter the date of the most recent flight review, or equivalent, completed by this pilot. Refer to 14 CFR 61.56 for accepted equivalents.

**Type Ratings:** List all type ratings on the pilot certificate. If the pilot holds no type ratings indicate "none." If the pilot holds a pilot certificate other than student and was flying an aircraft requiring an endorsement, enter the type and date of any logbook endorsement(s) for that aircraft. See 14 CFR 61 for examples of required endorsements.

**Student Endorsements:** If the pilot holds a student pilot certificate, enter all solo endorsements and dates on the student pilot certificate.

**Flight Time:** Complete the flight time matrix. Solo flight time should be included as "Pilot-in-Command (PIC)" and all dual flight instruction given should be included as "Time as Instructor."

**Additional Flight Crewmembers:** Complete this section if there were more than two required flight crewmembers on the aircraft. This also includes a check airman performing official duties but does not include cabin crew. State the capacity served by each included crewmember at the time of the accident.

**Passenger(s)/Other Personnel:** Enter identification and injury severity information for all passengers, cabin crew, and other personnel involved in the accident. See Page 1 of the instructions for the official definition of injury levels.

Several questions throughout the form allow for multiple responses; when appropriate, choose all responses that apply.

**These instructions only pertain to major issue areas covered by NTSB Form 6120.1 Pilot/Operator Aircraft Accident/Incident Report. For additional definitions of questions and responses, please refer to [www.ntsbgov](http://www.ntsbgov).**

# NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

## BASIC INFORMATION

### Accident/Incident Location

Nearest City/Place: Pinal Airpark State: AZ

ZIP: 85145 Country: USA

Latitude: 32.4882 Longitude: 111.2924

(Enter in decimal degrees or degrees minutes seconds)

### Accident/Incident Date/Time

**Description of Damage to Aircraft and Other Property** (Use additional sheet if necessary)

AFTER A FORCED LANDING INTO A FIELD, THE AIRCRAFT FLIPPED OVER DAMAGING THE TAIL, NOSE LANDING GEAR, AND THE AIRFRAME FIREWALL. THE PLEXIGLASS WINDOW ON THE PILOT'S SIDE ALSO CRACKED.

**NARRATIVE HISTORY OF FLIGHT** (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On Saturday 2/27/2021, I planned to fly Cessna 150 N6135T VFR from Chandler to Marana. This flight plan route is generally SSE-bound out of Chandler and is just under 60 NM in length point to point. That morning the weather all throughout the area of flight was great with just a report of light winds out of the west at Chandler. The aircraft preflight and walk around were normal. The starting fuel levels that day were checked visually and by use of a see-through dip stick. The right tank had 11 gallons in it and the left tank had 9 gallons. The fuel was 100 LL (the aircraft is STC'd for auto gas, but blue 100 LL was on board.) The oil was clean and golden. The dipstick showed that the oil level was between 4 and 5 quarts, so I added one whole quart of oil from the back of the plane.

I departed Chandler at approximately 10:26 AM, planning on an 80 knot GS cruising speed and a 6.5 gallons per hour fuel burn rate. The flight to Pinal was expected to take 50-55 minutes and I anticipated burning 9 gallons which included the fuel for taxi, takeoff, and maybe a touch and go or two at Pinal Air Park.

The departure from Chandler was normal. I used pilotage and Foreflight to navigate. I did not request flight following for this trip.

By 11:00 AM, I had arrived in the vicinity of Pinal Air Park. I was a bit earlier than I had planned for which meant I was definitely getting better than an 80 knot GS. My average power setting was 2300-2400 RPM.

About 10 miles out of Pinal, I dialed the CTAF into my radio and began monitoring for traffic. There was an airplane with a call sign (probably a flight school call sign) doing a practice approach to runway 12 at Pinal. I let him know where I was. I entered about a four-mile left base for runway 12 calling for a touch and go behind the flight school aircraft.

At 11:03 AM, my touch and go was completed and I turned to enter the left downwind for another touch and go. When I joined the downwind, I heard a radio announcement from a Cherokee stating he was also on downwind. I did not see him until I reached the "power pull" position on downwind adjacent to the 12 numbers. The Cherokee was approximately 3 miles out on the base and had probably been 3-5 miles out on downwind. My downwind was within gliding distance to the runway at Pinal.

Seeing how far out the Cherokee was, I decided to continue my downwind, and when I got roughly to about the 3 mile base point where I had first seen the Cherokee. Once there, I began to turn base for 12 at Pinal. But I could tell that the Cherokee now on final was moving very slow, I then decided not to turn final because since I did not think the approach spacing would be adequate. Instead, I just kept flying on the base and turned into a left upwind leg for runway 12. I noticed that this maneuver put me over the last row of jet liners parked on the field and to my delight, I was also on course visually for a straight in approach to runway 12 at Marana, which was about 7 miles away. I was basically flying along the SW side of the airpark, at approximately 1,300 AGL.

At approximately 11:07 AM, is when the engine failed. I was in straight and level flight when this occurred. The first thing I noticed was that the engine noise got dramatically quieter, and the RPM had dropped to 1200-1300 RPM. I could also feel the airplane abruptly slow down. I immediately pitched the nose to the Defined Minimum Maneuvering Speed (1.404 times Vs, which is 63-65 knots for this aircraft), and I did an emergency flow check (fuel selector valve on, throttle adjust, mixture full rich, carb heat blast on/off, primer locked, electricity/alt/master on, ignition on). The flow did not restore power to the engine or solve the problem. I then called out a mayday on the Unicom frequency in my flip flop. The frequency was either Tucson Approach or CTAF for Marana, I am not sure since I had been intermittently monitoring both frequencies several miles out of Pinal. Immediately a voice came over the radio saying that he heard me and asked where I was. I was very much paying attention to the engine and only briefly looked around to see where I was. So, I said over the radio that I was "between Pinal and Marana." The voice then told me to squawk 7700. I complied and I also activated the panel switch for the ELT. The voice said he would call notify emergency services for me.

// SEE CONTINUATION ON PAGE 11

**RECOMMENDATION (How could this accident/incident have been prevented?)**

## Operator/Owner Safety Recommendation

I recommend that Basic Pilot Training be amended to include information regarding Defined Minimum Maneuvering Speed ("DMMS"). By using this method of speed management, I was able to maintain control of the aircraft after the engine failure and safely descend without stalling or spinning the aircraft. Flying at the DMMS also allowed me to be able to change landing locations at the last minute. Currently, basic pilot training only covers stall recovery procedures, but knowing how to define the aircraft's minimum maneuvering speed, and flying at that speed in a slow speed loss of thrust event can give pilots a new skill for saving their lives and the lives of their passengers in the event of an engine failure.

**MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)**Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

The Continental O-200 engine (S/N 63868-6A) stopped operating in flight. The prop completely stopped spinning and was not windmilling prior to landing, suggesting that the crank shaft was impeded by some internal component failure.

**CONTINUATION OF NARRATIVE HISTORY OF FLIGHT** from page 9.

At about 11:08 AM, the engine had completely stopped in air and was not windmilling at all. I did a second very fast flow check and this time recycled the mags and pressed the starter. Again, nothing worked to bring the engine back and I realized it was totally gone. I will always remember the sight of the prop sitting stationary as I was in the air. That is as real as it gets right there. I then began to turn my attention to landing.

The terrain I was flying over seemed foreign to me as I am not from Arizona, and I felt like I had very few options for landing. In the area surrounding Pinal when I was approaching the airport, I noticed a lot of irrigation ditches and roads that had fences and telephone or power lines close to them. Unfortunately, as I was scanning for safe landing sites, I did not see any green fields to land in. I have always been trained to land on green, but there were no green fields in sight, just light brown fields everywhere to the front and sides of me.

I did see what looked like a light brown colored dirt road and lined up for a landing on it, but it turned out to be a ditch full of water. Because I was at DMMS and had not put down any flaps yet, I decided to sidestep to a field adjacent to the ditch. I remember tightening the safety belt around my waste as I was mentally committing to landing there.

At about 20 feet AGL, I put down the full flaps to slow the aircraft down and make it more buoyant. I pulled the control yoke all the way back toward my chest and was able to hold the nose wheel off as much as I could to get the plane to go slow down. But the nose wheel eventually hit the dirt, and instantly the plane flipped over on to its back.

I was conscious all throughout the emergency off field landing. I remember clinching my teeth and looking up at the passenger side air vent. Curiously, it popped straight out when the plane tumbled.

After the roll over, I was literally hanging in my seatbelt straps and had to unlock myself. I reached down into my waistline to find the seatbelt latch. I pulled it apart and the harness let me loose. This caused me to drop onto the headliner face first, and that is when I believe that I hit my head a second time. The first time was during the roll over when my forehead hit the ceiling of the plane.

After literally falling out of my straps, I noticed that the right cabin door was partially open, so I kicked it all the way open with my foot. Before leaving the airplane, I remembered to reach up to the panel and switch off the master switch and turn the fuel selector valve off.

I then exited the plane through the copilot door. I got to my feet and noticed that my head was hit. I was having pains in my head, neck, and shoulders. I had blood on my left lower leg. I walked around the front of the airplane and did not see any fire or smoke.

After a few minutes, a Good Samaritan showed up with a woman in their pickup truck. The man walked into the field and came up to me and took my arm. The woman remained at the pickup truck. The man then helped me walk across the field. A few moments after I noticed a Cessna flying low over the crash scene. Then an ambulance and a fire truck arrived on scene. The EMTs and the firemen set up a backboard for me to walk on over the 9-foot-wide irrigation ditch. This was the ditch I almost landed on. After this, I was taken to a hospital in Tucson.

At the hospital, I was given MRI and CT scans which showed that I was not injured. I was released from the hospital at 23:30 hours that evening.
