Fuelling hose, hose reel and ladder.

**NARRATIVE HISTORY OF FLIGHT** *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I had stopped at Jefferson County Airport for fuel during my return flight to Auburn after having flown out to Port Angeles to look at a possible airplane project to acquire for my CAF squadron. The day's flying was to be S50 - KCLM - 0S9 - S50.

When I pulled up to the pumps there were already two airplanes getting fuel so I taxied in behind one to await my turn when they were finished. I pulled the throttle to idle, shut down the engine, shut off the fuel selector and set the parking brake. Once the 150 completed fueling, I released the brake and pushed my plane into position. There is a crown to the ramp at that location so I put my chocks in front of and behind my left wheel and set the parking brake. After topping of my fuel tank, 7 or 8 gallons, and putting away the hose and static line, I got ready to start the aircraft.

While the Luscombe was a recent purchase, I have been flying a Piper PA-11 that also does not have an electric system since 2016, so hand propping is not a new procedure for me. I've also hand propped numerous aerobatic aircraft in my 20 years of participating in aerobatic competition and there are still a few older airplanes out there with minimal equipment.

After fueling I turned the airplane's fuel selector to On, ensured the mags were Off, went to the front of the airplane, tugged on the prop to ensure it wasn't going to roll and pulled the blades through a couple times.

Early on in flying the PA-11 I developed a pre-start cockpit flow that served me well and I transitioned a similar flow to the Luscombe. Starting at the bottom left of the cockpit I check that the fuel is On, then move up to the parking brake and ensure that is pulled out and set. If it's the first start of the day I'll then pump primer once or twice, did not do that this time as the engine was warm. Then I set the mags to Both and lastly move down to the throttle and pull it all the way back. This is a circular motion from the bottom left to the bottom center of the cockpit.

I checked the chocks were tight up against the tire and then went to the front of the airplane. It took two or three pulls on the prop for the engine to start. Then as I was walking back around the airplane to the cabin to check oil pressure before getting in, the engine RPM began to increase. It seemed slowly at first then more rapidly. At that point the airplane began to pivot in on the left wheel in the chock and once it reached near 90 degrees started to roll forward into the fueling station. I attempted to get to the cockpit to shut the engine down but lost my balance and stumbled as I was ducking under the strut.

Damage to the airplane was the propeller, and with the resulting sudden engine stoppage one can surmise there will be internal engine damage. The engine mount failed where there was an old repair as well. The right wing strut hit a concrete filled steel pillar and was substantially damaged beyond repair.

After the accident, I informed the fuel island owner of what happened and exchanged contact information. Then pushed the airplane to a tie down spot and secured it until I could return and trailer the airplane back.

**RECOMMENDATION (How could this accident/incident have been prevented?)**

Operator/Owner Safety Recommendation

Subsequent conversations with other pilots who have had similar experiences have led me to plan a change to my starting procedures.

Instead of ensuring the fuel selector is On during the start, it will be set to Off. If I have a similar situation in the future, holding the airplane in place for the contents of the gascolator is easier than having to make it to the cockpit to shut off the aircraft.

One other change that will be done during the repair process is purchasing the hydraulic brake STC that is available and remove the old mechanical brakes from the airplane.
