DAMAGE

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

After obtained the AWOS information (calm Wind and clear), I took off at 800 am 3/26, Friday from Pinal airport, MZJ, flew to Marana Regional Airport, AVQ. I checked at AWOS at AVQ during the flight and confirmed that the weather at AVQ is clam and clear. I landed safely with full stop at Marana airport. Then I taxied back and took off from AVQ, flew back to MZJ.

During the flight back, I checked with AWOS again for Pinal Airport and found that the weather has changed with cross wind at about 9 knots and Gust about 14 knots. I entered the downwind at 45 left entry. After I entered the final, the setup was not to my satisfaction for landing due to the wind, I decided to do a go-around. And I spoke to my CFI about the wind and he cautioned me to be careful. The pattern was great and I approached the runway number at a good speed of 70 and good altitude. I was trying to keep the airplane from drifting to the left. I flared as usual, however, due to the crosswind; the airplane ballooned after it landed. After it bounced, it landed very had with its nose hitting to the runway. The nose wheel and propeller impacted the ground, and had significant damage.

There is minimal injury for myself, the PIC. Small laceration at the left knee.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

1. I could returned back to Marana airport, and used their runway 21 if there was a crosswind. If the weather was calm in Marana, I could have landed at runway 12.
2. I could performed another go around after the airplane was bounded.
