Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Substantial damage to the landing gear, airframe, propellers and engines. No property damage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The purpose of the flight was to build multi-engine experience, departing from KUAO around 1520 local with landing practice at KCVO. I flew from the right seat while Tyler Dressel sat in the left seat. There were no passengers. During the initial approach Tyler simulated a critical engine failure as we approached a left downwind for the runway. I was focused on maintaining directional control and do not recall the power settings. I simulated identifying, verifying, and securing the left engine but did not make any changes to the throttle, propeller or mixture. I performed the single engine approach to land on Runway 35 with a standard traffic pattern. Shortly before touchdown I began to lose directional control as the aircraft drifted to the left. As it became clear the aircraft would not remain over the runway I applied full power by advancing both throttles for an attempted go-around which caused the aircraft to further bank and yaw to the left. The left wingtip struck the runway which caused the aircraft to yaw further to the left. When the landing gear touched down the right main wheel collapsed and separated and the nose wheel collapsed. Both propellers impacted the surface and the aircraft slid off the left side of the runway. Immediately upon stopping I pulled mixture controls to idle and shut off both fuel selector valves. Tyler shut off the electrical system. I opened the door and we exited the aircraft. There was no fuel leaking. There was a hydraulic fluid spot approximately 1 ft in diameter. There was one small landing gear component, the tip of a propeller blade, and several paint chips located in the trail of the aircraft. The right main wheel penetrated the belly of the plane where it remained. No other debris was in the area. I contacted the airport manager who arrived on scene and called the NTSB. No objects on the ground were damaged aside from markings on the pavement. There was no fire and no injuries.
