Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Dual propeller strike, landing gear collapsed, left wing bent and scraped from striking the surface, belly of aircraft scraped from sliding on surface. No property damage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Pat Ryan and I rented N125RJ on 04/29/2021. Prior to the flight we discussed we would be practicing maneuvers and procedures required on a multi engine checkride. We briefed the the simulated one engine inoperative procedure once on the car ride out and once in the plane before startup. The loss of engine power would be induced by pulling one of the mixtures to idle cutoff. The person on the controls would maintain directional control, advance mixtures (one left aft to continue simulation), propeller controls and throttles to their full forward position, make sure flaps and gear were up and pitch for vyse (best climb rate with one engine inop). The person flying would then identify the inop engine (dead foot dead engine) and verify by slowly bringing the inop throttle to idle. Then it was time to simulate weather. Advance mixture slightly and advance throttle slightly (to about 10" MP). We departed at approximately 1520 from KUAO and headed south for KCVO. ATC was busy but we finally aquired flight following from Seattle Center somewhere near KSLE. We did a number of maneuvers such as steep turns and accelerated stalls. Eventually, we canceled flight following and began our descent into KCVO. I pulled the left mixture and Pat completed the checklist that I discussed before. We entered a left downwind for runway 35 and so forth. On final we had a slight left crosswind (I beleive winds were 300 at 7) but final appraoch was looking good. On short final Pat became too slow and began to balloon. The aircraft was also slightly weathervaning to the left due to the crosswind. At this time he attempted a go around and the thrust from the right engine took over. The left wing struck the surface and eventually we came down nearly sideways on the landing gear causing it to collapse. We slid to a stop off the left side of the runway. Pat shutoff all fuel sources immediately. There was no property damage other than scrapes on the pavement and there were bits and peices of the aircraft left in trail. This accident occurred nearly two months ago and this description is to the best of my recollection. Please contact me if there are any further questions.
