Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The aircraft collided with the lowermost power line cable just south of the crash site, causing minimal damage to the power line cable, indicated in slight fraying at the point of impact. The aircraft struck the ground inverted and nose down. The aircraft's left-wing impacted a fence surrounding the highway overpass. One, approximately 5-foot wide section of the fence was damaged. The aircraft rotated slightly around the left wing during the impact sequence, striking the right-wing and nose on the ground. The wings, nose, and forward cabin section of the aircraft suffered substantial damage. Aft of the passenger cabin, including the entire tail section, was relatively undamaged.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On May 9th, 2021 at 4:33 MDT, I departed from Roswell Air Center (KROW) with an intended destination of Stellar Airpark (P19). Prior to departing KROW, I received fuel services, topping off the aircraft. The entire flight leading up to the Santan Mountains, approximately 13 miles southeast of P19, was uneventful. Upon crossing the Santan Mountains, radar services were terminated, and I changed to Stellar Airport's CTAF, as advised by ATC. At this point, it was nearing the end of civil twilight, vastly reducing my ability to discern outside visual references. I keyed the microphone in an attempt to position the pilot-controlled lighting to the high setting. Still unable to make visual contact, I made numerous attempts to turn on airport lighting. The airport beacon was NOTOM'd inoperative. Approximately 5 miles south of the field, I believed I had made visual contact with the airport and continued straight-in runway 35. At approximately 150 feet AGL, I realized that I had mistakenly lined up with S McClintock Dr. I initiated a go-around. On the go-around, I made visual contact with the powerlines perpendicular to S McClintock Dr and parallel to Loop 202 and was unable to maneuver the aircraft to avoid. The aircraft struck the power lines causing me to lose control and impact the ground below.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Having flown into Stellar Airport (P19) at night in the past, I was familiar with the airport being difficult to make visual contact with. Accordingly, this accident likely could have been prevented if the recommended downwind pattern entry was performed at traffic pattern altitude, or if the VOR-A approach was flown to ensure terrain and obstacle clearance.
