NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

KCNO depart point. Pleasure flight to Big Bear L35 Before departure did a compass swing 2:00 pm, at the NorthEast end of the field. Apx. 1 hour with swing in compass and taxi time.

Obtain Taxi Clearance to rwy 26R CNO, and requested VFR Flight following to Big Bear L35. apx 3:15 pm pacific time.

Runup and take off, apx. 3:00 pm Normal Left down wind departure rwy 26R. Contacted SoCal following tower release. Using ForeFlight GPS flight track, (first time)

Cleared as normal over the Top of ONT Approach Path. apx 4500 ft and leaned engine first time. Normal Climb at 110 mph, 500+ fpm. Used the right fuel tank, all the way to engine stoppage.

Lean again at 6500 ft.

Checked AWOS L35 at apx 8000 ft. , at 8500 ft getting setup to report VFR reporting "Snow Valley" when the engine quit.

Immediately, communicate "Motor Quit" to SoCal, turned to nearest Airport San Bernardino International Airport (was insight) Went to Best Glide Speed (85 mph) Switched High Boost Pump on, mixture full rich. SoCal asked if I wanted Redlands or San Bernardino airport vectors. San Bernardino vectors provide 6.5 miles. Almost immediately with sink rate aircraft could not clear a Ridge Line towards S.B. Airport. Made a Wing Over maneuver to avoid contacting the ridge to the right. Made a wide left turn 360 degree turn while twice running the engine out emergency check list. Instructed passenger to look on the right side of aircraft for place to make emergency landing. Only tall pine trees and bolders were visible.

At about 270 degrees into the turn, I spotted a patch apx. 400-500 feet above me. to my right to the West. Patch was avoid of pine trees and bolders.

I lined up the aircraft on to this patch, I estimated to be only 100-150 feet long and 50 feet wide. Maneuver the aircraft nose high to be some what parallel to the slope (apx. 75-80 degrees). Bleeding off airspeed until I was near the end of the patch with additional trees ahead.

Forward view was blue sky only. Used the lower left wind screen view. As I bleed off speed, knew I was near stall speed. Forcibly Stalled the aircraft at the end of the patch.

The aircraft tail contacted the ground (slope was now apx. 50-55 degrees) Between tail impact, and the main body. The right wing contacted a Shrub Oak spinning the aircraft apx. 120 degrees to the right. Due to the very low speed stall the aircraft did not slide but just "Flopped" hard onto the ground. Right Wing strut was bent into passenger door. requiring both myself and passenger to be extricated thur the pilots left door.

SoCal notified to local Fire and Paramedics which arrived in minutes.

Our survtival was due to several items, early in my flight training aerobatics, installation of 4 point harnesses, quick EMS response, and an act of God in finding this patch.

Lost fuel from Right Wing in Crash, also oil from oil pan damaged in crash.

Unknow if ELT was activated .

No Fire present.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Require 4 point harnesses in all General Aviation Aircraft.

I can't believe the engine just quit. Need to find a cause to reply.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

Completed a Compass Swing at Chino's Rose before departing Chino Airport. Requested and received Flight Following from the CNO Tower. No abnormal Mag or RPM drop during runup. Standard Left down wind departure from Chino.

Using ForeFight for the first time in the air. Route from CNO - to L35 a little farer north of the route I've nomally used. Since, Spark Plugs were reported to be foul ?? Why. Leaned at 4500 ft and 6500 ft. planed to lean again a 8500 ft. and again at 9500 ft entering into L35 pattern.

The engine was running very very smooth as usual. There was no indication of any engine problem, No hiccups or missing, normal engine temps and CHT.

Had been awhile since a flight into L35, but have made this flight many times before. Always used same engine operating tech.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
