Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The aircraft received damage to its propeller and rudder upon flipping over. The rudder was crinkled in and the propeller was bent. The upper wing sustained minor damage to 4-5 ribs but for the most part was in good condition.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On Saturday May 22nd my girlfriend (Talia Kasten) and I flew from Santa Paula up to Santa Ynez to spend the day in Solvang. A friend of ours also flew up in his Cherokee. We all departed late afternoon and made our way down the coast and descended to around 1200-1500FT in a loose formation. As we approached the Ventura fair grounds and pier area, I started feeling some engine roughness. I pushed full throttle and applied carb heat, I also ensured mixture was full rich and pitched for best glide. The engine kind of came back but then stuttered again. I looked and saw Oxnard several miles to the south and knew that I wouldn't be able to make it on the power I had left. With each stutter I lost more and more power. I called my friend on the radio telling him I had engine troubles and was turning away from over the population center of town. I knew if I headed Northwest I had the 101 or 33 highways I could land on. When I had made the turn however I saw that there was a decent amount of traffic as well as trees, light poles, and power lines. At this point I decided to proceed to land in a field I have often used with students during simulated engine outs during flight training. The time was approximately 7:18pm and there was still a prominent sea breeze. Thankfully the field was tilted toward the coast. So I was able to land into the wind. As I lined up on final I told my girlfriend to "hold on". And switched off the electrical system and magnetos. I slowed the aircraft and set it down in a 3 point position. We rolled on the wheels around 40 feet and caught an irrigation line and we're flipped on our back. Once I regained my whereabouts I heard dripping and smelled fuel. I slowly loosened my shoulder harness and eased my way down to where I could crawl out. I made my way up to the front and started getting my girlfriend out. By that time a bystander had ran over from the road and helped me get her out. Shortly after emergency services arrived and secured the scene.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Be aware of conditions that could lead to carburetor icing. If there's even an expectation that one could start to get it, turn on the carb heat. Also fly at higher altitudes to ensure enough time is given for water to burn out of the system.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
