Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left wing tip, left horizontal stabilizer and elevator, empanage, belly all contacted the runway when left main gear collapsed. Main landing gear likely damage, some visual skin "buckling" on right side of the tail.

Official inspection not yet completed.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

First departure of the day from KBJC to E25 under IFR flight plan. Normal flight with light wind, no turb, mainly clear skies and unrestricted visibility. Second leg from E25 to KPRC operated VFR. Normal flight with cruise at 8,500. Contact KPRC tower 16 miles south for clearance into Class D. Cleared for left traffic 21L. Left 45 deg entry into pattern. Cleared to land 21L while on downwind, performed landing checklist. All systems appeared correct including gear extension and check. Green gear indication and all three legs visible and appearing normal in the mirror mounted on underside of the right wing. Normal approach continued with GUMPS check after turning Final. All seemed normal until main landing gear contacted the runway surface. Instead of supporting the aircraft, a "mushing" feeling on the left side became evident as the aircraft continued to settle and left main would not support weight. I continued elevator back pressure to keep the nose high to slow the aircraft while securing the engine with mixture to idle/cutoff and fuel selector to "off". Left horizontal stab/elevator and left wing tip contacted the runway as left main gear continued to collapse. The right main gear also collapsed under the belly during this phase as the aircraft turned to the right with left wing tip and left horizontal stab remaining in contact with the runway. The aircraft came to a stop on the right side of the runway facing the approach end of 21L. Aircraft secured with ignition off and master off. The nose gear remained extended throughout the landing. No prop strike or engine damage occurred. I exited the aircraft through the left door and got clear to wait for on field emergency services. Small fuel stream noted from the left wing fuel vent.
