Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Damage to aircraft was limited to left wing and left horizontal stabilizer

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

At approx. 14:10 PM following a check with local ASOS and a normal runup procedure, I lined up on centerline of RWY 13 @ KBYG. Winds were reported at variable @ 04. I don't remember the altimeter setting temperature was right around 60 degrees F. Full power was applied and the take-off roll started in a perfectly normal manner. At a point approx. 320 ft into the roll, the tail came up at approx. 45 KIAS. As soon as the tail wheel came off the ground the plane veered sharply left (toward a deep ravine that comes up very near the runway at that point). I instantly reduced power to an idle and applied full right rudder and aileron. Just as the plane left the asphalt surface of the runway, the plane responded to the unputs described above and tracked parallel to the runway astraddle of the runway lights. It still took full right aileron and rudder input to maintain this track. Now at a point approx. 900 ft down the runway, the aircraft suddenly reacted to the full right control inputs and darted back across the runway at approx. a 30 degree angle. At this point, I have now applied full left aileron and rudder input in an effort to restore straight, controlled motion of the aircraft which was now in a skid to the left as it crossed the runway. As soon as the aircraft left the paved surface of the runway and ran onto the softer soil surface on the shoulder, the plane ground-looped to the right, damaging the left wing and horizontal stabilizer, coming to rest in an approx. heading of 280 with the right wing tip within approx. 1 ft. of the edge of the paved surface.
