Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I landed on the mains, and then the nose wheel came down onto the runway. The plane then veered suddenly to the right, about 20-30 degrees and then just as suddenly to the left, about 20-30 left of the runway centerline. I applied some rudder correction. The plane then veered again to the right, similar amount of degrees, and a second time to the left, at first about 30-40 degrees and then almost 90 degrees. At this point, the centrifugal force of the tight left veer caused the wing to tip over. The plane stopped at a heading of about 010. When the wing tipped, the plane was moving at less than 1 mph. It stopped on taxiway A3 off runway 16L.

The veers were incredibly sudden and it was the second landing where it did this. I had previously landed in The Dalles, and although the plane veered there, the wind was 23 mph with 30 mph gusts, and I thought the veers were due to wind shear.
