Beechcraft BE 35-B33
#CD-733

On September 11, 2021 at approximately 1pm Mountain Time, I prepared to depart from a dirt strip at Borderline Café near Baker, Nevada. I performed my preflight and found everything to be normal. I had 11 quarts of oil and 45 gallons of fuel.

After engine start, I performed my normal preflight checklist. My JPI engine analyzer as well as the other instruments showed everything in the green and appropriate. My engine gauges confirmed the engine was working properly. I ran my engine RPM to 1900 and checked the mags and prop. The engine was appropriate and running smoothly so I decided to depart.

I lined up on the runway and with the mixture rich, gave the engine full throttle and departed. At 78 MPH I lifted off. Once I had a positive rate of climb and appropriate airspeed, I retracted my landing gear. As the gear was retracting, I heard a loud bang. I thought something was wrong with my landing gear. I immediately lowered my landing gear and made a slight left turn. My plan was to return to the strip to inspect the plane.

It was only then I realized I was losing power and the plane was going down. I landed in the desert, turned off the fuel and extricated myself from the plane. I found I had bent the prop, lost my nose gear and right main landing gear. I was unable to lock the door of the plane to secure it.

I was the only passenger. There were no injuries.
