Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Airframe parachute deployed. Tail section of the aircraft detached and not in the immediate visual vicinity of the aircraft. Left wing tip damaged. Several trees sustained damage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed KMAN at 5:35pm MST to KEUG. Climbed to 8500' AGL, configured airplane for 65% cruise power at typical LOP settings. Deviated slightly south of direct to avoid higher terrain in Cascades and reported and forecasted lighter cloud coverage to the south. After crossing the western Cascade range summit, initiated an initial descent on the autopilot. Tuned Cascade Approach on 120.250 and was monitoring KEUG ATIS for the current weather. Received ATIS, shut off the autopilot and began hand flying for the visual approach into the valley. Shortly after, at what I estimate was about 4500 MSL, the airplane decelerated suddenly and began misfiring badly. The sun was setting making a clear assessment of forced landing options difficult but there was nothing but forest in my glide path view. Recognizing that I only had a couple of minutes for gliding with no favorable options visible, I focused first on recovering power. After trying all memorized options for recovering power and with smoke coming into the cockpit and AGL diminishing, I committed to an off-field landing. I issued a mayday call on 120.250, squawked 7700 and pressed ident as requested by approach control. I had a few more seconds to assess whether the terrain ahead had possibility for a better outcome than an airframe parachute deployment; I could see nothing but forest and glare. I committed to an airframe parachute deployment, lowered the handle, notified approach of my intentions, checked my airspeed and deployed the parachute. I shut-off fuel and once on the ground, turned off all electronics and exited the airplane.

Once I recognized there were no breaches of fuel and a fire did not appear imminent, I entered the airplane and powered on the avionics. I called Cascade Approach on 120.250 but did not get a response. I made a mayday call on 121.5 and reached an Alaska Air flight. I notified them of the situation, that I was uninjured, gave them the Cascade approach frequency and my position as a bearing and distance from KEUG to relay to Cascade Approach. I also gave them my wife's contact information. After some conversations back and forth with the Alaska crew and a Southwest crew, I hiked approximately 20 yards to a road and waited for emergency services to arrive.
