

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Puyallup State: WA
 ZIP: 98374 Country: USA
 Latitude: 47.1030 N Longitude: 122.2902 W
(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 11/22/2021 Local Time: 13:49
mm/dd/yyyy Time Zone: PST

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N7592Y

Manufacturer: Cessna

Model: R182

Serial Number: R18200141

Year of Manufacture: 1977

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

☒ IFR-Equipped and Certified
☐ Commercial Space Flight
☐ Unmanned Aircraft

Maximum Gross Weight: 3100 lbs

Weight at Time of Accident/Incident: 2585 lbs

Number of Seats: 4 Flight Crew Seats: 2

Cabin Crew Seats: _____ Passenger Seats: _____

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
☐ Balloon
☐ Blimp/Dirigible
☐ Glider
☐ Gyroplane
☐ Helicopter
☐ Powered Lift
☐ Rocket
☐ Ultralight
☐ Unknown

Type of Airworthiness Certificate

(Check all that apply)

Standard

- ☒ Normal
☐ Aerobatic

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Belly of airplane was damaged and the prop.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I Lucas Holm watched student Vildan Sitdikov perform a preflight on N7592Y. I asked about the oil and if there was anything found wrong with the aircraft. He said the airplane was good. We then sat down and I dispatched the airplane for flight on flightschedulepro. We verified when maintenance was due and that we could fly the airplane. We then both walked out to the airplane and got in. The student started the airplane and taxied to runway 35. He performed a runup and followed the checklist. I asked him to do a soft-field takeoff and he did without any issues. We departed the airport to the south and performed multiple commercial maneuvers. I then asked him to head back to KPLU and said on the way I would like him to perform a simulated emergency gear extension. He pulled out the check list and followed it. I watched the right main gear get pumped into the down and locked position. Vildan said his gear wasn't down. I thought that he hadn't pumped it all the way and so I used the hand pump and tried to lower it but it would not pump into the locked position. I then pushed the "Landing gear" circuit breaker back in and didn't get any indication of the gear pump coming on. I then raised the gear and could feel the change as the gear came up but never saw an amber light indicating that the gear was locked in the up position. I cycled the gear with no indications of it being locked up or locked down. With the gear in the down position I did 2 or 3 more low passes at KPLU and talked with people on the ground if they could see what was wrong with the gear. People just said the left main gear was hanging down. The student couldn't see the gear. I called the assistant chief pilot and told him what was going on and that we would be doing an emergency gear up landing. We then performed one more emergency gear extension and followed the checklist and the left main gear still didn't go down. I then made one more low pass at KPLU and then stayed in the traffic pattern and made a few circles on the west side of the airport to let an airplane depart. We then ran the gear up landing checklist and I Lucas Holm did emergency gear up landing. Once the airplane was stopped on the runway we got out of the airplane and talked with the firefighters. No one was injured.

Lucas Holm certificate # [REDACTED]

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

With out knowing what caused the problem I don't know what I would recommend. If the problem is the gear actuator I would recommend that the time for the inspection be reduced for flight schools as they have more landing being performed then normal operations of a 182RG

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Failure of the left main gear actuator suspected.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

I, Vildan Sitdikov, was preflighting the aircraft Cessna 182 (N7592Y) on 22nd of november 2021. No defects were found. My instructor and I were conducting the Stage V Check. I went through the "before starting the engine" checklist. The engine started and we taxied to the runup area. During the runup no issues were found. All instruments and gauges were in the normal operating range. After the runup was complete, I performed a soft-field takeoff and departed to the south to perform maneuvers. Performed multiple commercial maneuvers. My instructor had me perform a simulated emergency gear extension. He pulled out the "Landing gear" circuit breaker and I followed the "emergency landing gear extension" checklist. During the manual gear extension, the left main gear failed to lock in the down position. My instructor announced his "right gear" was extended but mine was not. My instructor then used the hand pump to get the gear down. The circuit breaker was pushed in and nothing happened. I cycled the gear with no indications of it being locked up or locked down. We attempted to lower the failed gear by maneuvering the aircraft at high G-loads so the gear could fall down. However, finding it unsuccessful, a couple of low passes were made so people on the ground could see what might be an issue. People reported the left main gear was hanging and not down and locked. Then, we performed another "emergency gear extension" and the left main gear still was not visible in the down and locked position. My instructor made several radio calls to notify others in the traffic pattern about a possible emergency gear up landing. We went through the checklist and repeated every action so as to be ready for a landing. Several repetitions were made so the landing with gear up could safely be made. All chief flight instructors were notified at the school. Then, a landing with gear up was performed by my flight instructor and all procedures were followed in the checklist. A very smooth and soft landing was made. Nobody was injured. My instructor and I were safely evacuated from the airplane.
