SOME DAMAGE TO RIGHT WING LOWER SKIN
NO OTHER PROPERTY WAS DAMAGED

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

At about 1130 hours on 11/28/21 I departed Camarillo, CA (CMA) enroute to Santa Paula airport (SZP). Shortly after, I approached SZP and called on the radio for a left downwind entry to runway 22. My normal procedure, and what I taught for years as a flight instructor, is to select "landing gear down" while downwind. (Note: in this case, after the incident the landing gear control was in the "down" position. I cannot remember specifically when I selected "gear down".) When downwind abeam I commenced flying the aircraft as though the gear was down. The pattern was busy and I planned a short approach to expedite the landing. I called on the radio for "left base" and "left base to final, runway 22 SZP". I don't recall performing my usual GUMPS (Gas, Undercarriage down and locked- 3 green, Mixture, Prop, Seat Belt) checklist. I did not follow my usual procedure and initiate a go around when the landing was not assured when passing midfield, but continued with the landing. I skidded off the runway and into a berm at the departure end of runway 22. After the incident I turned the electrical master off and exited the aircraft and walked away. The aircraft was intact and the landing gear was not deployed.
