Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Right wing strut buckled. 2 out of 3 prop blades broken. Spinner dented and cracked. Indentations in bottom engine cowl. Windshield cracked. Vertical stabilizer skin wrinkled and tip slightly crushed.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

After a normal preflight inspection and run-up at KTRM I departed Runway 12 at 0755 PST. I performed a straight out departure with the fuel selector in the both position and leveled off at 600 feet AGL. I reduce power to 20 inches manifold pressure and 2300 rpm's. I leaned the mixture out to an indicated 10.5 gallons per hour. I flew about 4 more miles and selected the right tank with the fuel selector valve. I then intercepted the survey base starting point about 8 miles from KTRM at 600 feet AGL on a 90 degree heading. Approximately 5 miles later I suffered a power loss of approximately 60 percent while beginning to lose airspeed and some altitude. I started a right turn to head back to KTRM and started troubleshooting. Applied mixture full rich, prop max rpm, carb heat and mag check. At that point I lost all power and abandoned further troubleshooting because my full attention was devoted to picking out a landing spot and maintaining a safe speed and glidepath to that spot. This all happened very quickly at approximately 400 feet AGL. I brought in 3 notches of flaps during the flare and touch down is a three point attitude in a dry, freshly plowed farm field. On the roll out of about 200 feet the tail started coming up due to the soft dirt. The tail continued to rise until the airplane was almost completely stopped then proceeded to flip over on its back. The flight was intended to be a geophysical survey flight in the Salton Sea Area (400'-600' AGL) flying a 200 meter grid pattern (045/225 headings) under contract with USGS with a return to KTRM.

RECOMMENDATION (How could this accident/incident have been prevented?)
