Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Substantial damage to propeller tips, firewall, floor boards, and controls.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Comments from Operator:

A Private pilot on a personal flight was the sole occupant of the airplane. Winds were 260 at 12 kts for runway 30 at KSQL. Weather was VFR. Pilot experienced windshear on short final with a loss of airspeed. Elected to continue the approach. Landing resulted in 2-3 bounces before the pilot went around. On the second approach, the pilot bounded again and went around. Pilot landed the airplane on the third attempt. Pilot inspected the nose gear after securing the airplane and did not notice any damage. Pilot did not notice issues with flight controls or damage to the propeller blade tips. Damage was found the next day by an instructor during preflight.

Comments from Pilot:

Due to sudden loss of airspeed because of windshear during the short final and there were cross winds, I ended up too slow and flaring too high which resulted in bounced landing. Slow landing speed along with the cross winds(some gusts too) and flaring too much resulted in the bounced landing. I tried to still land which resulted in second(might have been a third too) bounce after which I finally decided to go around and came back and tried to land again. I bounce very little on the second landing and I immediately did a go-around. I landed without any issues on the third try. During one of the bounced landings, it looks like I ended up having a prop strike which I did not notice while flying in the pattern. Propeller strike resulted in damage to propeller tips, engine, firewall, and flight controls.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The rental pilot received about 25 hour of training before being signed off for his BFR. There were no concerns raised by the training instructor despite the total number of hours of instruction the pilot received prior to being signed off for the BFR. We could have had another instructor fly with the Private Pilot to verify that the pilot was proficient. We also need to emphasize the importance of going around earlier and avoid trying to "save" the landing. Proper monitoring and management of airspeed and aircraft energy was a critical factor in the accident. The pilot got too slow, flared too high, and failed to recognize the low energy state of the airplane close to the ground. This pilot completed his primary training at another airport and we could have also checked in with their previous flight school to check if the student had any issues during training or prior accidents and incidents.
