

NATIONAL TRANSPORTATION SAFETY BOARD

NTSB Form 6120.1

PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

Email the pilot/operator aircraft accident/incident report to the investigator-in-charge of your accident/incident. If email is not available, mail the report per the instructions below.

If your accident/incident occurred in Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Mississippi, Alabama, Georgia, Florida, the District of Columbia, Puerto Rico, or the US Virgin Islands, send the form to: NTSB, ERA, 45065 Riverside Parkway, Ashburn, VA 20147.

If your accident/incident occurred in Ohio, Michigan, Indiana, Wisconsin, Illinois, Minnesota, Iowa, Missouri, Arkansas, Louisiana, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Colorado, or New Mexico, send the form to: NTSB, CEN, 4760 Oakland Street, Suite 500, Denver, CO 80239.

If your accident/incident occurred in Montana, Wyoming, Idaho, Utah, Arizona, Nevada, Washington, Oregon, California, Hawaii, or the territories of Guam or American Samoa, send the form to: NTSB, WPR, 505 South 336th Street, Suite 540, Federal Way, WA 98003.

If your accident/incident occurred in Alaska, send the form to: NTSB, ANC, 222 West 7th Avenue, Room 216, Box 11, Anchorage, AK 99513.

Rules pertaining to notification of aircraft accidents and incidents, as well as overdue aircraft are found in 49 *Code of Federal Regulations* (CFR) Part 830 http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&tpl=/ecfrbrowse/Title49/49cfr830_main_02.tpl. These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

INSTRUCTIONS TO PILOTS/OPERATORS FOR COMPLETING THIS FORM

It is necessary that ALL questions on this report be answered completely and accurately.

If more space is needed, continue on a blank sheet of paper.

Nearest City/Place: Use the name of the nearest community in the state where the accident/incident occurred.

Date/Time: Indicate the date and local time of the event. Be sure to indicate the time zone.

Phase of Operation: Indicate the phase of operation during which the accident/incident occurred.

Aircraft Information: Enter aircraft make and model information as indicated on the aircraft registration certificate, including series. If the involved aircraft is certified as "amateur-built," include the name of the producer of the kit or plans, unless an NTSB employee instructs otherwise.

Maximum Gross Weight: Enter the certificated maximum gross weight for the aircraft involved in the occurrence. This should be the same as the maximum gross weight indicated on the aircraft weight and balance documents.

Engine: Enter engine make and model information as indicated on the engine data plate.

The NTSB uses this form for aircraft accident prevention activities and for statistical purposes. NTSB regulations (49 CFR Part 830) require that **ALL** questions be answered completely and accurately. Completion of this form will take approximately 60 minutes. The NTSB does not guarantee the privacy of any information provided in this form. You need not complete this form unless it displays a valid OMB control number, in accordance with 5 C.F.R. § 1320.5(b), which applies to this collection of information.

B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowling, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

Type of Fire Extinguishing System: If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

Owner/Operator Information: Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

Revenue Sightseeing Flight: Indicate whether the accident aircraft was conducting revenue sightseeing operations under 14 CFR Part 91 at the time of the accident.

Air Medical Flight: Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

Public Aircraft: Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

Purpose of Flight: 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

AERIAL APPLICATION--Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

AERIAL OBSERVATION--These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

AIR DROP--Aerial operations, other than aerial application, that are intended to release items in flight.

AIR RACE/SHOW--Includes any flight operations conducted as part of an organized air race or public demonstration.

BUSINESS--Includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

EXECUTIVE/CORPORATE--Company flying with a paid, professional crew.

FERRY--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

FLIGHT TEST--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

INSTRUCTIONAL--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

OTHER WORK USE--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

PERSONAL--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

POSITIONING--Non-revenue flight conducted for the primary purpose of relocating the aircraft. Examples include moving the aircraft to a maintenance facility or to load passengers or cargo etc.

UNKNOWN--Use only if the primary purpose of flight is not known.

Other Aircraft--Collision: For all accidents involving a collision with another aircraft, including parked aircraft, check "Collision with other aircraft" under Basic Information and complete this section indicating details about the OTHER aircraft involved in the collision.

Airport Information: Complete this section if the accident/incident occurred on approach, landing, takeoff, departure, or within 3 statute miles of an airport. Please refer to the FAA Airport/Facility Directory or other official source for airport information.

Airport Identifier: Provide the official 3 or 4 character airport identifier number.

Runway: Indicate the number of the runway used, including L, R, or C if applicable.

Runway/Landing Surface: Indicate the type of intended runway/landing surface (do not indicate surface conditions). If the surface type was mixed, check all that apply.

Condition of Runway/Landing Surface: Indicate the condition of the intended runway/landing surface. If multiple conditions existed at the time of the accident, check all that apply.

Weather Information at the Accident/Incident Site: Indicate the weather conditions reported at the accident/incident site at the time of occurrence. If no weather reporting was available for the accident/incident site, indicate the reported conditions at the nearest reporting site. Specify the weather reporting site identifier, the observation time, and distance from the accident/incident.

Sky/Lowest Cloud Condition: Indicate the height above ground level of the lowest cloud condition present at the time of the accident/incident and whether coverage was reported as few, scattered, broken or overcast. Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

NOTAMs (D and FDC), AIRMETs, SIGMETs, PIREPs: Describe all NOTAMs (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

Flight Crewmember Information: Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

Degree of Injury: See Definitions on the top half of Page 1 of the instructions. Minor injury is not defined. If an injury does not meet the criteria for another injury category, select Minor.

Date of Last Flight Review or Equivalent: Enter the date of the most recent flight review, or equivalent, completed by this pilot. Refer to 14 CFR 61.56 for accepted equivalents.

Type Ratings: List all type ratings on the pilot certificate. If the pilot holds no type ratings indicate "none." If the pilot holds a pilot certificate other than student and was flying an aircraft requiring an endorsement, enter the type and date of any logbook endorsement(s) for that aircraft. See 14 CFR 61 for examples of required endorsements.

Student Endorsements: If the pilot holds a student pilot certificate, enter all solo endorsements and dates on the student pilot certificate.

Flight Time: Complete the flight time matrix. Solo flight time should be included as "Pilot-in-Command (PIC)" and all dual flight instruction given should be included as "Time as Instructor."

Additional Flight Crewmembers: Complete this section if there were more than two required flight crewmembers on the aircraft. This also includes a check airman performing official duties but does not include cabin crew. State the capacity served by each included crewmember at the time of the accident.

Passenger(s)/Other Personnel: Enter identification and injury severity information for all passengers, cabin crew, and other personnel involved in the accident. See Page 1 of the instructions for the official definition of injury levels.

Several questions throughout the form allow for multiple responses; when appropriate, choose all responses that apply.

These instructions only pertain to major issue areas covered by NTSB Form 6120.1 Pilot/Operator Aircraft Accident/Incident Report. For additional definitions of questions and responses, please refer to www.ntsb.gov.

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Airframe is of premolded fiberglass / composite construction; control surfaces are fiberglass over foam cores.

Forwardportion of starboard wing tip and nav/strobe/landing light broken, 2" dia. puncture starboard wing leading edge, 12" long crease in port wing leading edge, port wing AOA pin dislodged, propeller blades broken (engine not running on impact), spinner dented, lower cowling ruptured, main LG fairing ruptured, 2" puncture in rudder, 20" gash in underside of fuselage, tail wheel swivel-stop bent, 2 fuselage punctures, approximately 4" x 4" forward of port wing root; aircraft came to rest within trees about 10 feet above the ground, in the process of lowering the aircraft to the ground the starboard gullwing door/window was broken; no indication of major structural damage but unable to confirm until aircraft is back in the hangar and thoroughly inspected.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in Ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

This Experimental, Amateur-built Aircraft was being flown within the Phase 1 Limitations listed under its Special Airworthiness Certificate dated September 10, 2019.

After take off with full fuel at approximately 10:30 am with the intention of remaining in the pattern and flight testing some modifications to the engine cooling system, I'd been doing circuits around KORS at 2500 ft...all was well, engine humming along, temps were nominal...cruising along at 130-140 kts...decided to land...descended to pattern altitude...entered downwind at 85-90 kts stabilized at 1000 ft...80 kts abeam the numbers...lowered flaps & LG...(LG & flaps are interconnected w/ single flap setting of 20 deg.)...engine stopped...slowed to 75 kts, switched fuel pumps, attempted restart, engine cranked fine but did not fire up...turned base, attempted restart again, engine cranks fine but no start...at that point I was in a state of disbelief that my engine would not restart, although I realized that I may not reach the runway... turned 45 deg towards runway threshold...terrain is flat with a wooded strip approximately 100 feet wide separating rows of one and two story residential structures...another restart attempt, nada...way below the proper glide path and I became quite aware that I was heading for some trees...was feeling surreal, calm...no images of my life passing thru my brain...definitely flew the plane, stall warning did not go off...the engine was not windmilling prior to impact, and upon impact my shoulder strap risers performed well...no injuries...no smell of fuel...First thing I did was turn off Master Switch, and out of habit, turn off all other rocker switches; when doing so, I did not notice if any of the rockers, normally "on" in flight or whenever the engine is running, had been in the "off" position...If I'd had any available bandwidth in my brain, I would have sat tight and dialed 911 on my cell phone, but my instincts had me opening the door to exit the aircraft had a sense of being within a bunch of tree branches...I now think I was experiencing some tunnel vision...in any case, I didn't realize I was up so high...I recall having no trouble getting my butt up on the headrest and swinging my legs over the gullwing door sill and onto the wing...then all of a sudden I was on my back on the ground in considerable pain after having fallen 12 to 15 feet onto soft, soggy soil, flat terrain. The property owner witnessed the low flying airplane and heard the impact into the trees; he called 911 at 11:36 am. Aircraft remained intact, stuck and supported between trees in a nose-high attitude. Estimated airspeed at impact between 50 and 60 kts.

Probable cause of engine stoppage: The engine stoppage occurred as I was lowering the Landing Gear and Flaps. In the process of lowering the LG, I experienced some difficulty getting the lever control into the down and locked position. Normally lowering the gear is done with the right hand. I used my left hand to assist getting the lever in the locked position...One possibility is my left hand may have brushed one, two, or three of the rocker switches which control the ignition coils, fuel injectors, and ECU of the MPEFled engine. A second possibility is that when I returned my left hand to the control stick,, I abruptly shoved the stick forward to correct for the nose-high attitude caused by the deployment of full flaps and my left hand brushed up against them. If either of these events occurred, I was completely unaware. This is speculation on my part and may be confirmed (or not) once the aircraft has a new propeller installed and the engine is run up. My hunch is it will fire right up, smoothe as silk, and stop when the rocker switch energizing the ignition coils or fuel injectors is turned off.

We'll see.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

Addition of guards to prevent inadvertent deactivation of rocker switches controlling essential engine functions; said rocker switches are part of an "EXP-Buss", a component which is no longer being manufactured.

Better emergency training/awareness of the pilot to handle "what if" circumstances including the conscious check of proper positions for rocker switches

Better understanding of the organization and implications (...like beating them into my brain...) of the electrical system as designed by the pilot/builder of N194XS, aka me. The set up features a primary buss, an engine buss, and an essential buss, plus two batteries of equal capacity. A discrete row of toggle switches, referred to as "Plan B" switches which, when activated, are intended to ensure continuation of flight with an electrically-dependent engine. The switches provide: going to back up fuel pump+filter, going to backup battery, and the bypassing of the EXP-Buss by switching to a direct feed from battery to the engine and essential busses. When attempting restart, seeing as how the engine cranked fine, I did not think it necessary to bypass the EXP-Buss...I confess to recall my specific decision that because the engine cranked fine, there was no need to throw the toggle to energize the engine buss direct from the battery because the EXP-Buss was not fried. I did not consider the possibility that a portion EXP-Buss (in this case, one or two rocker switches) was not functioning properly. Thus, if what I have described as the "Probable Cause of engine stoppage" is correct, it was my failure to switch to my direct feed from battery to engine buss, thus bypassing the EXP-Buss and its rocker switches, and N194XS would not have ended up in trees short of the clear zone for runway 34 at KORS.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

My belief at this time is that there was no mechanical malfunction or failure; rather, there was a pilot-induced error which resulted in engine stoppage. This belief is subject to confirmation (or not) after new propeller blades are fitted and engine startup attempted.
